

Model Universes

Einstein Equation

$$R_{\mu\nu} - \frac{1}{2}Rg_{\mu\nu} - \Lambda g_{\mu\nu} = 8\pi GT_{\mu\nu}$$

Sterrewacht
Leiden

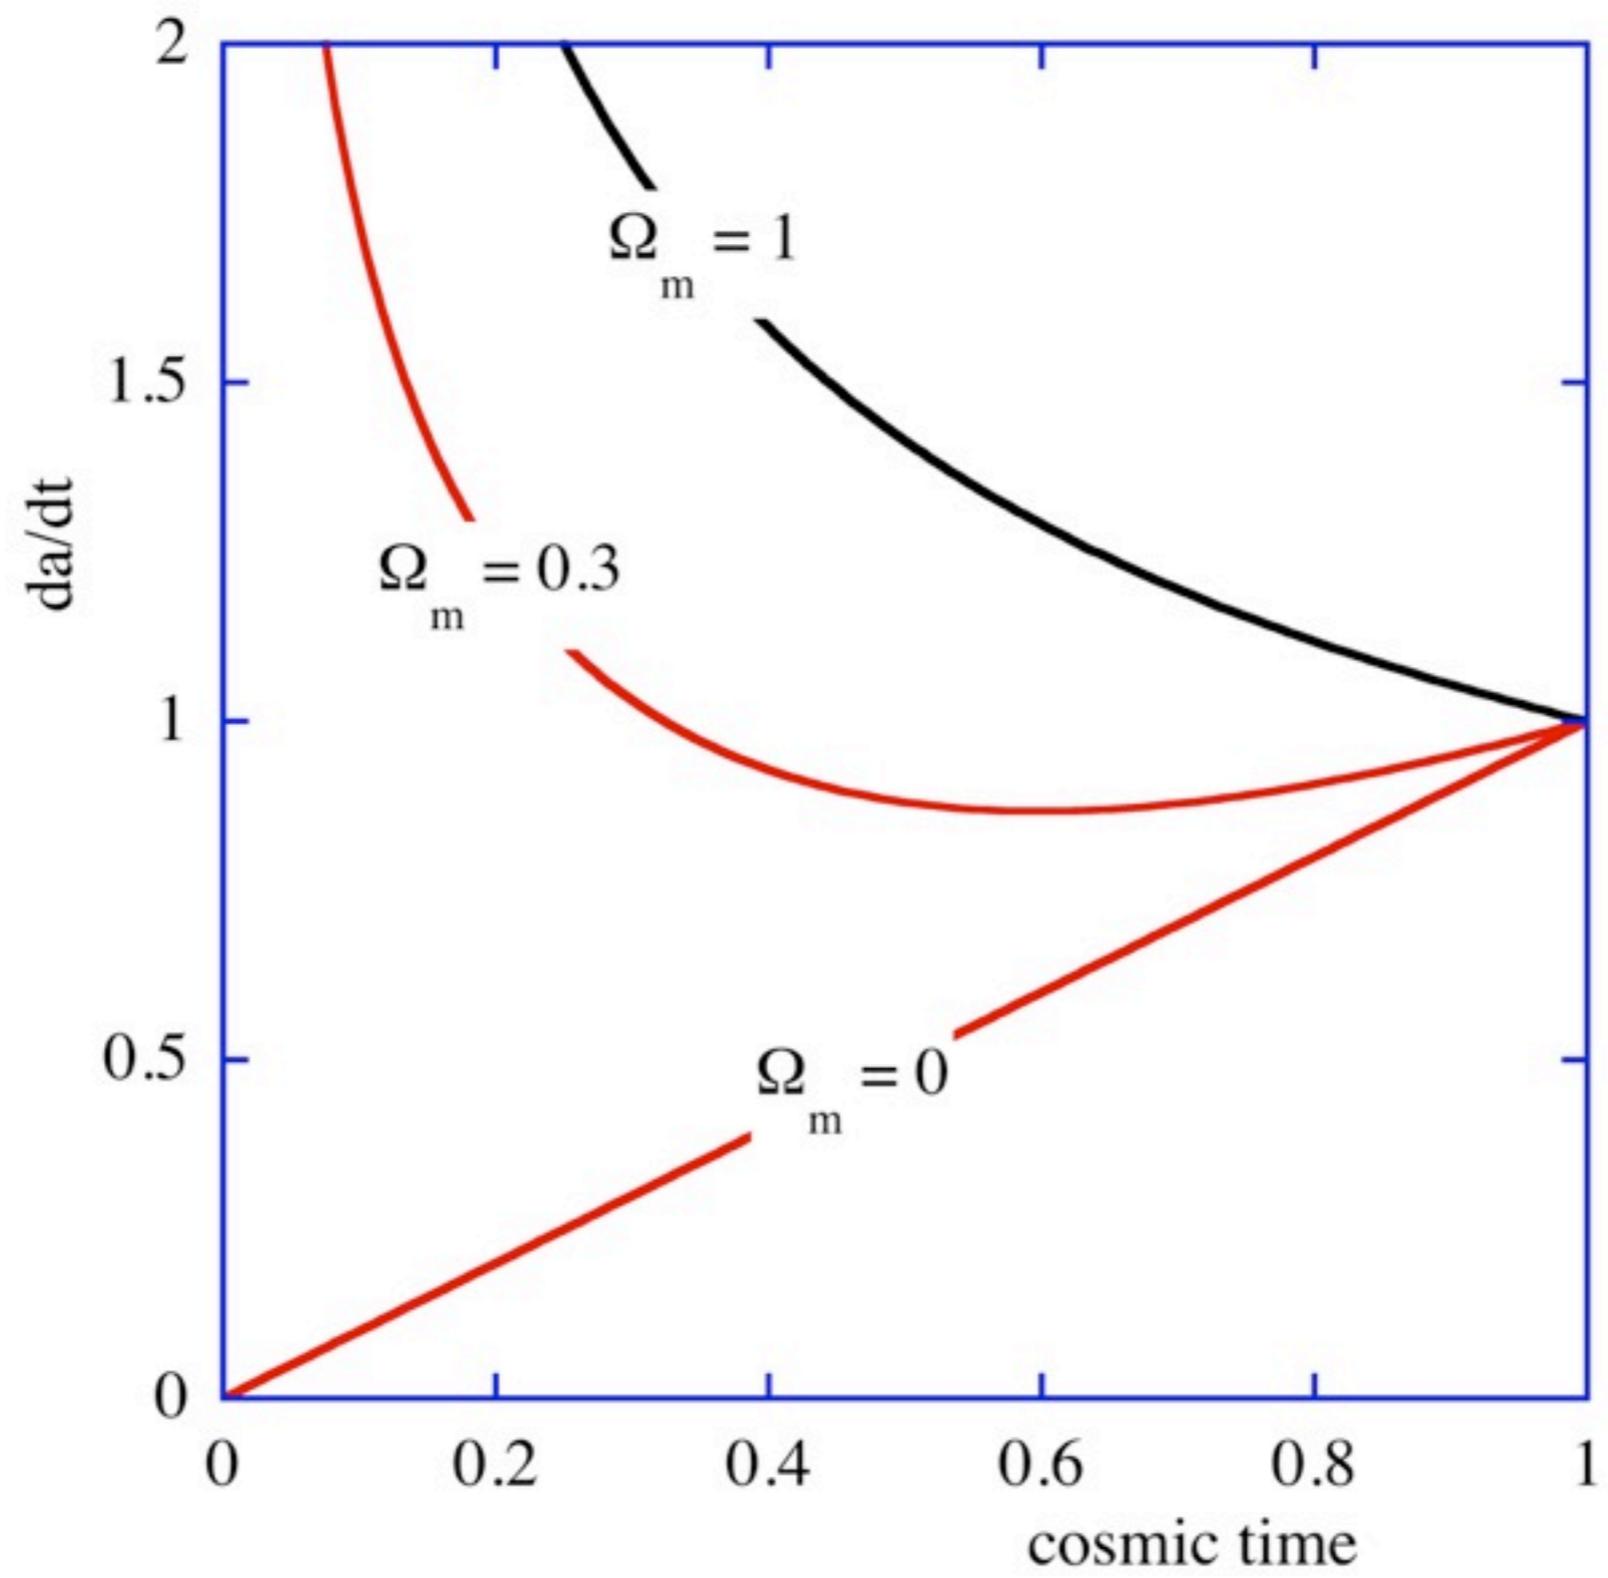

Friedmann Equations

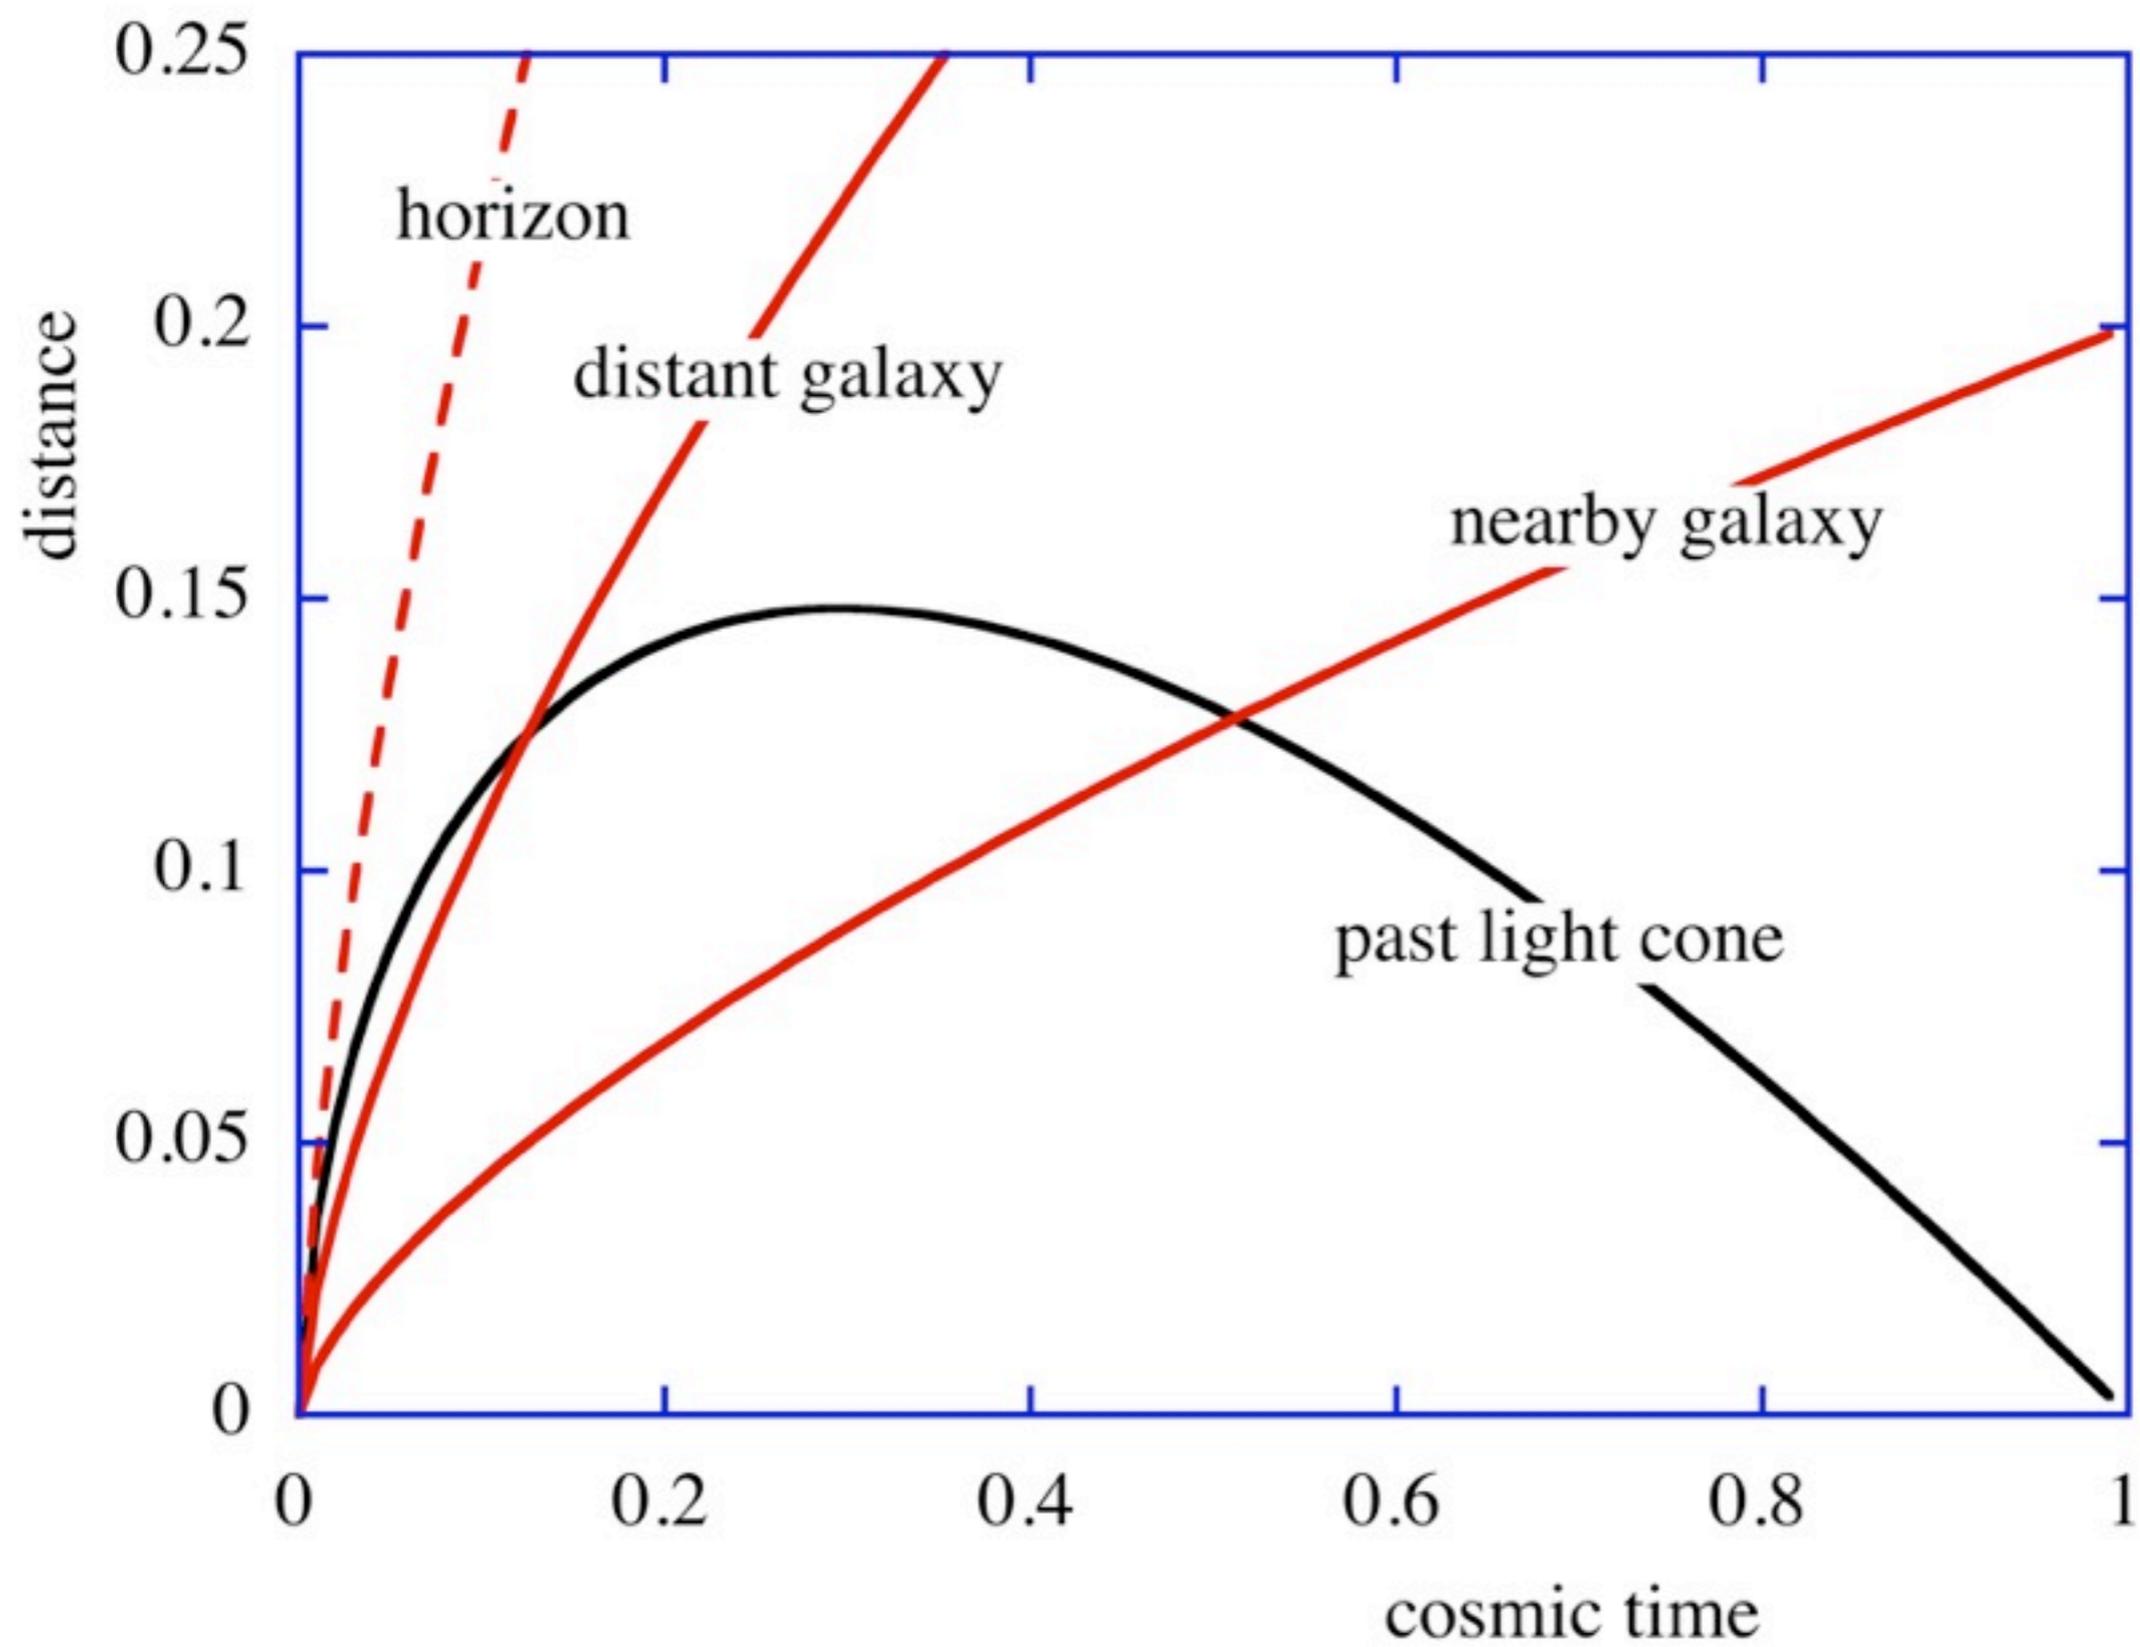

$$\left(\frac{da}{dt}\right)^2 = \frac{8\pi}{3}G\rho a^2 - kc^2 + \frac{\Lambda}{3}a^2$$

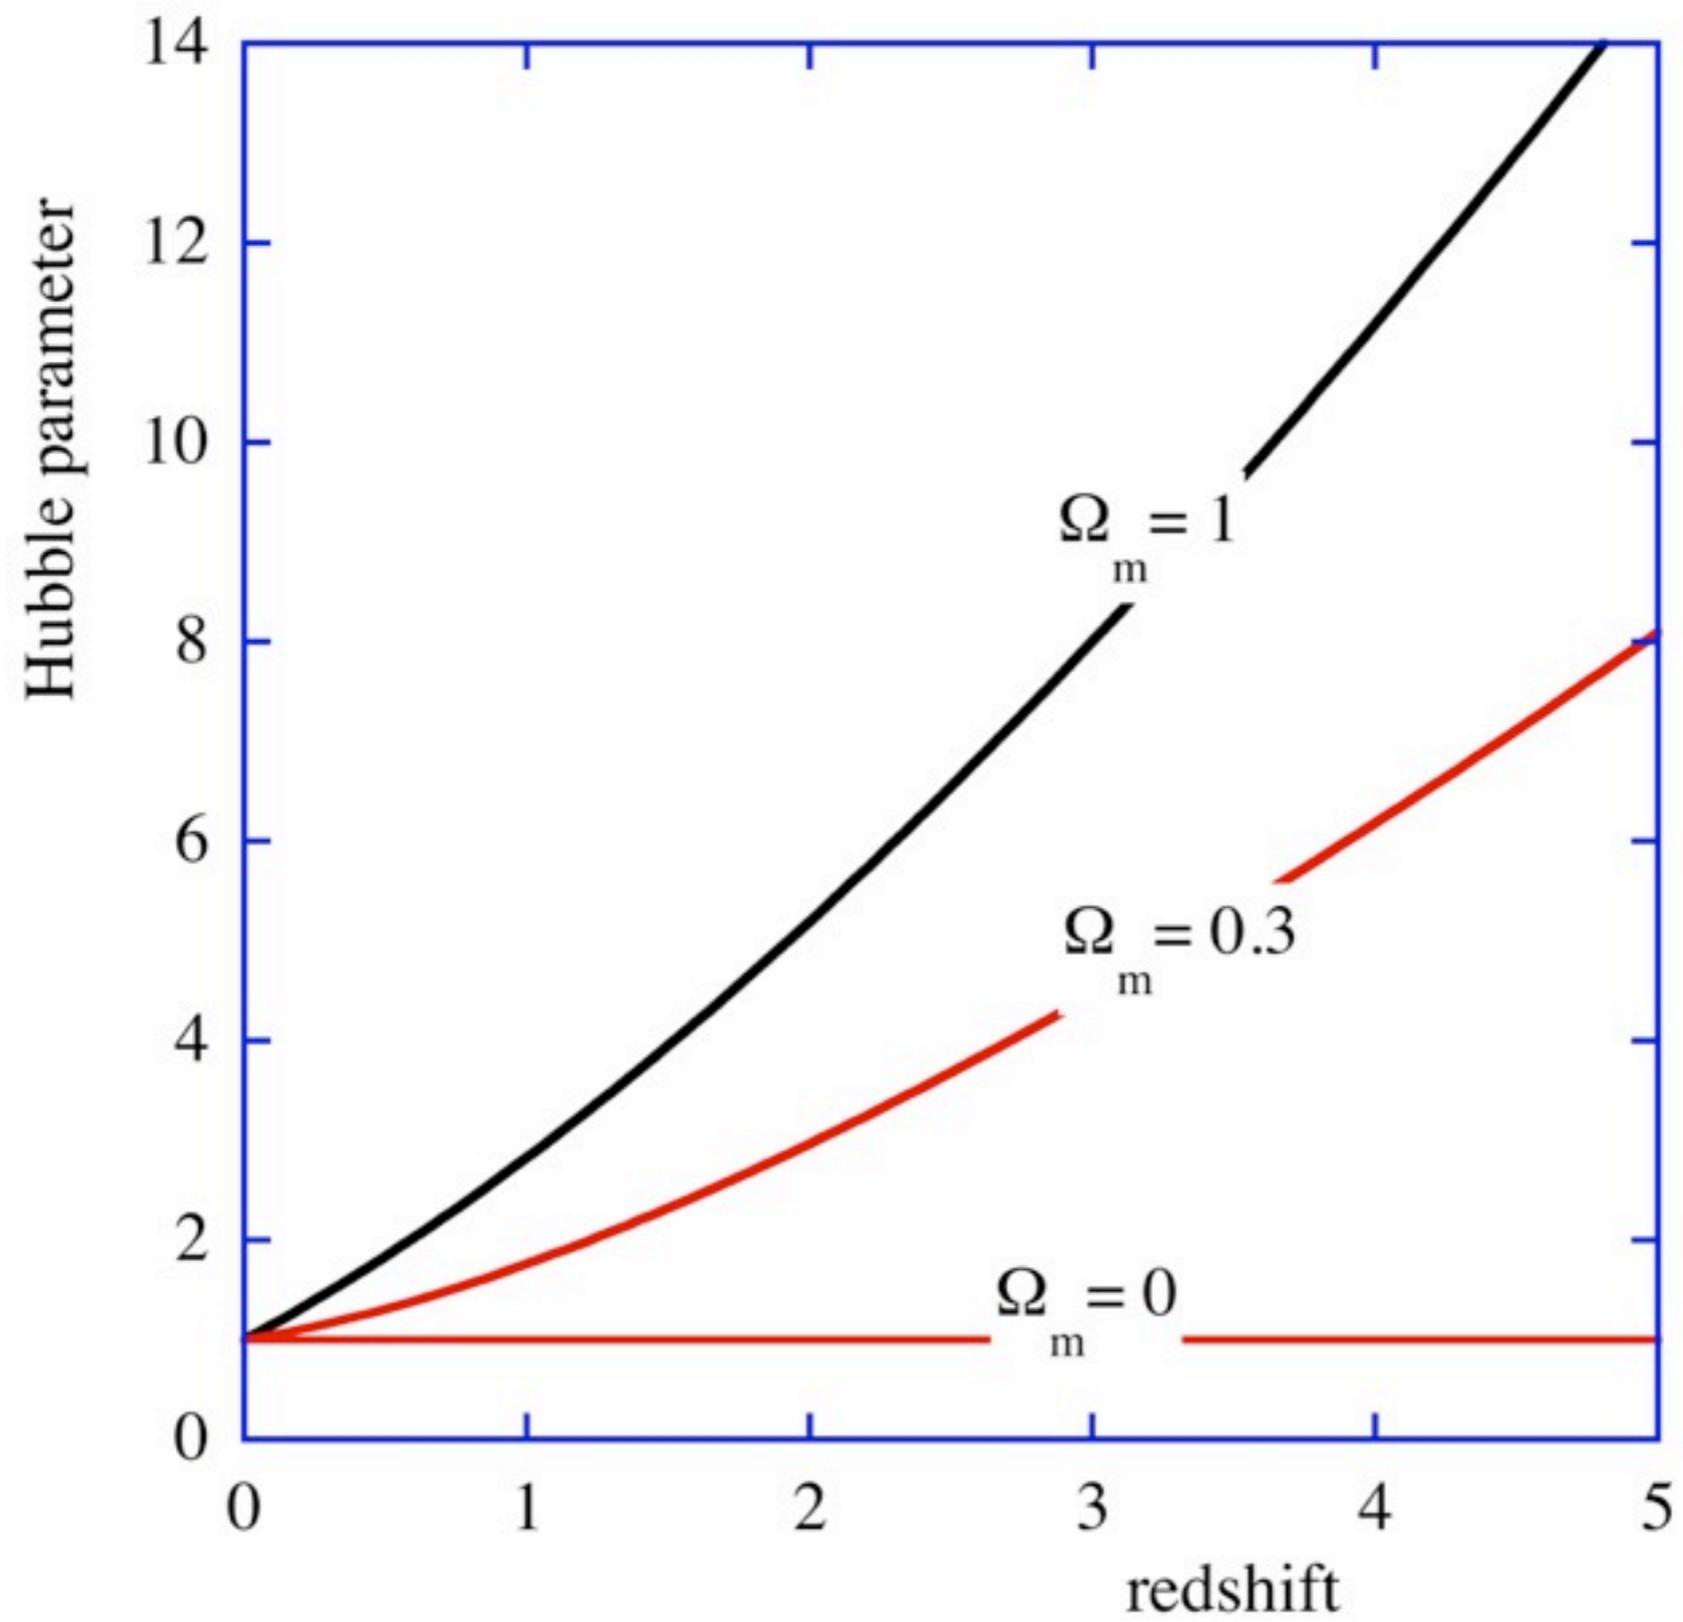

$$\frac{d}{dt}(\rho a^3) + \frac{P}{c^2} \frac{da^3}{dt} = 0$$

Generic solutions

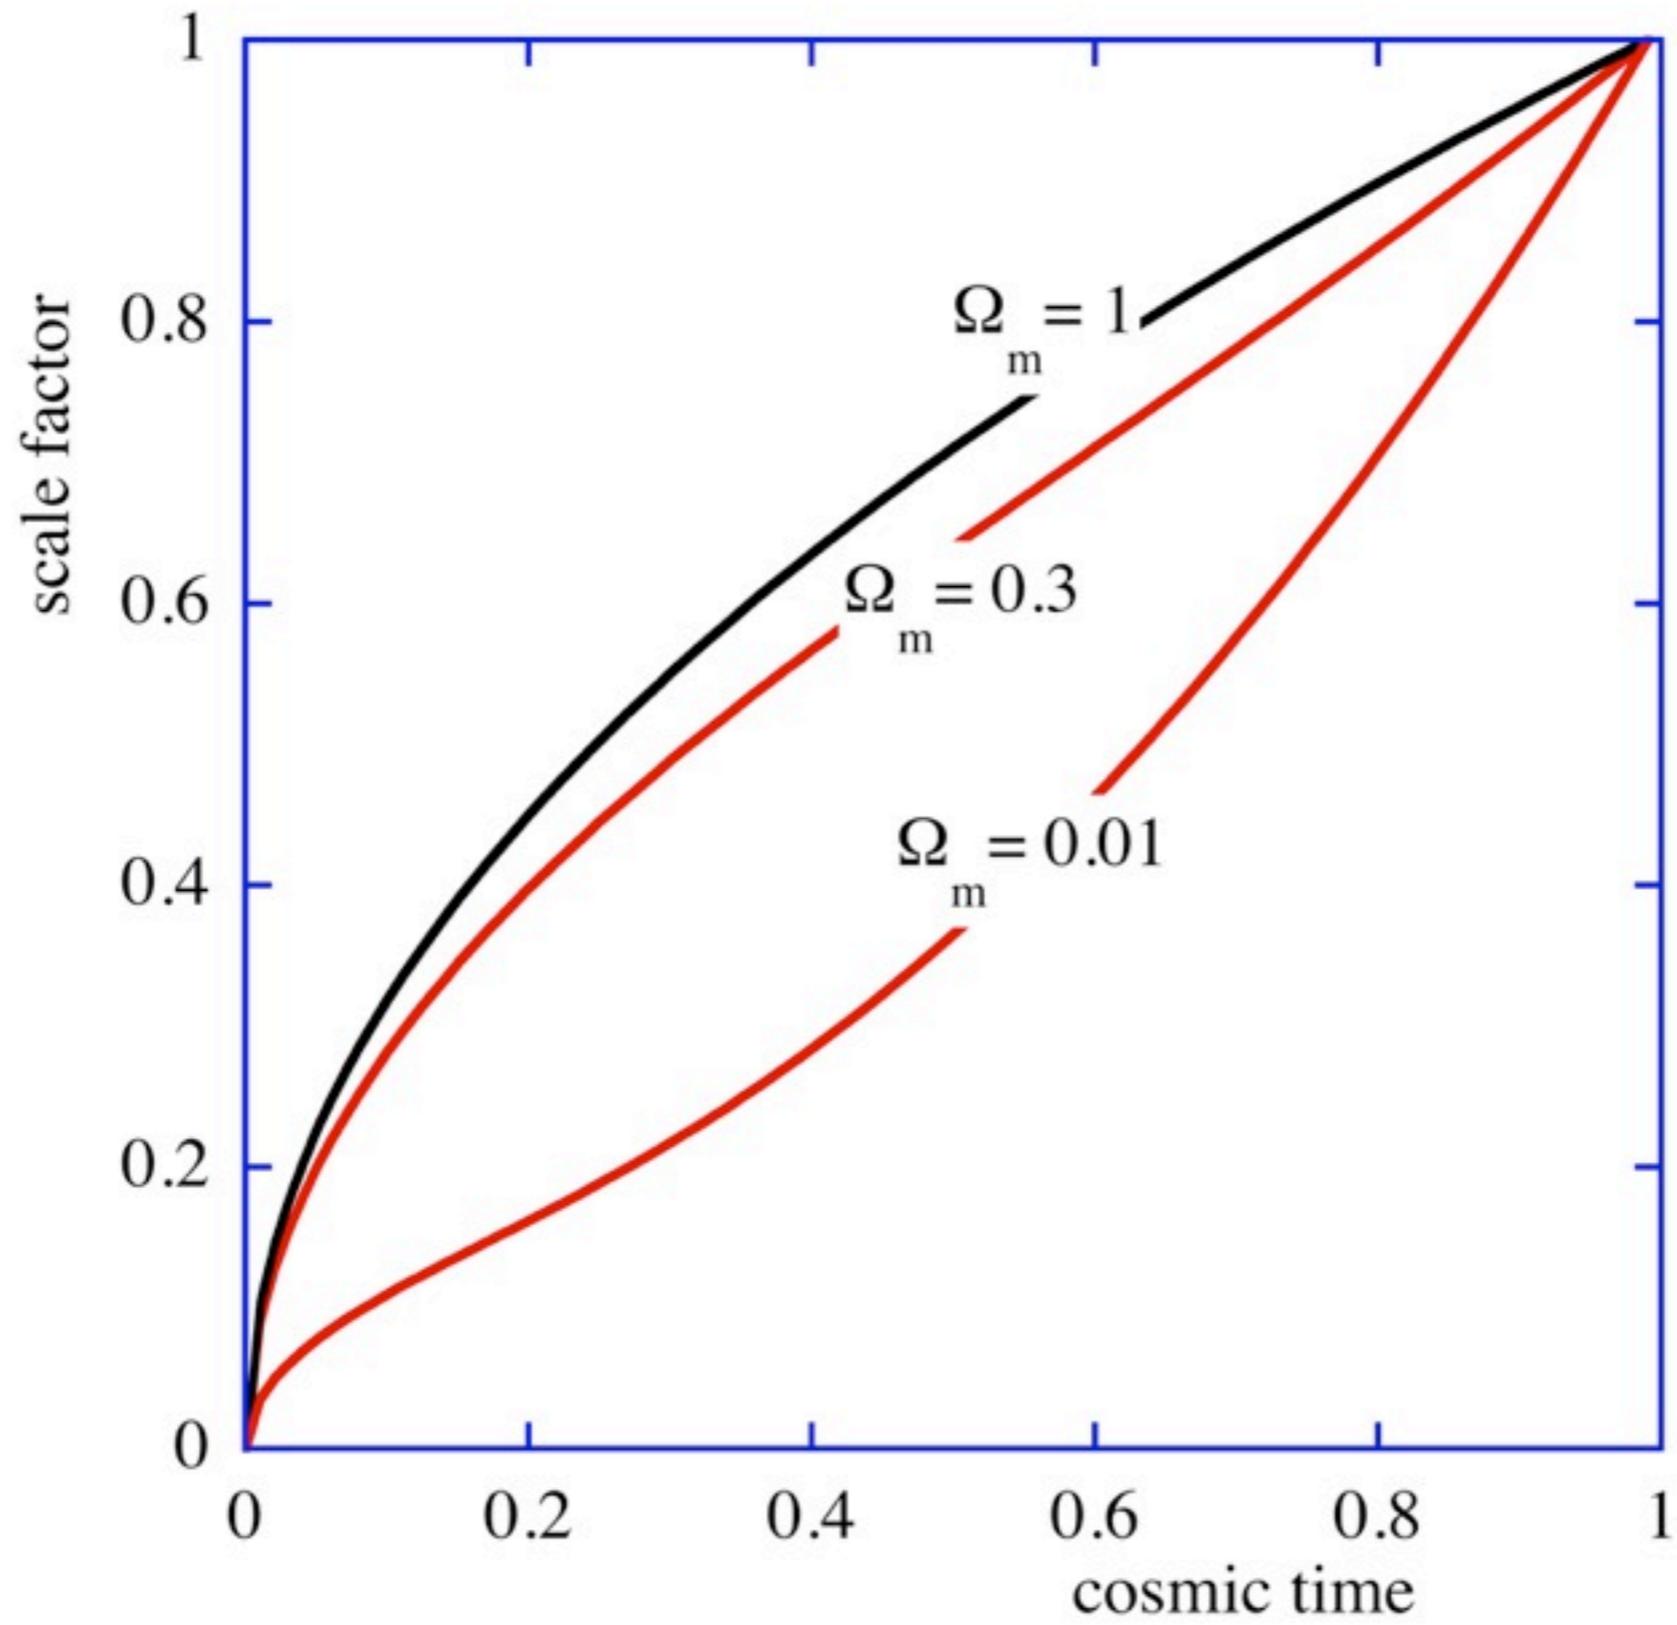

- Present epoch
- Ionized plasma
- Relativistic plasma
- Quantum plasma?
- Evolution of mass scales, looking ahead to interpretation of CMBR observations

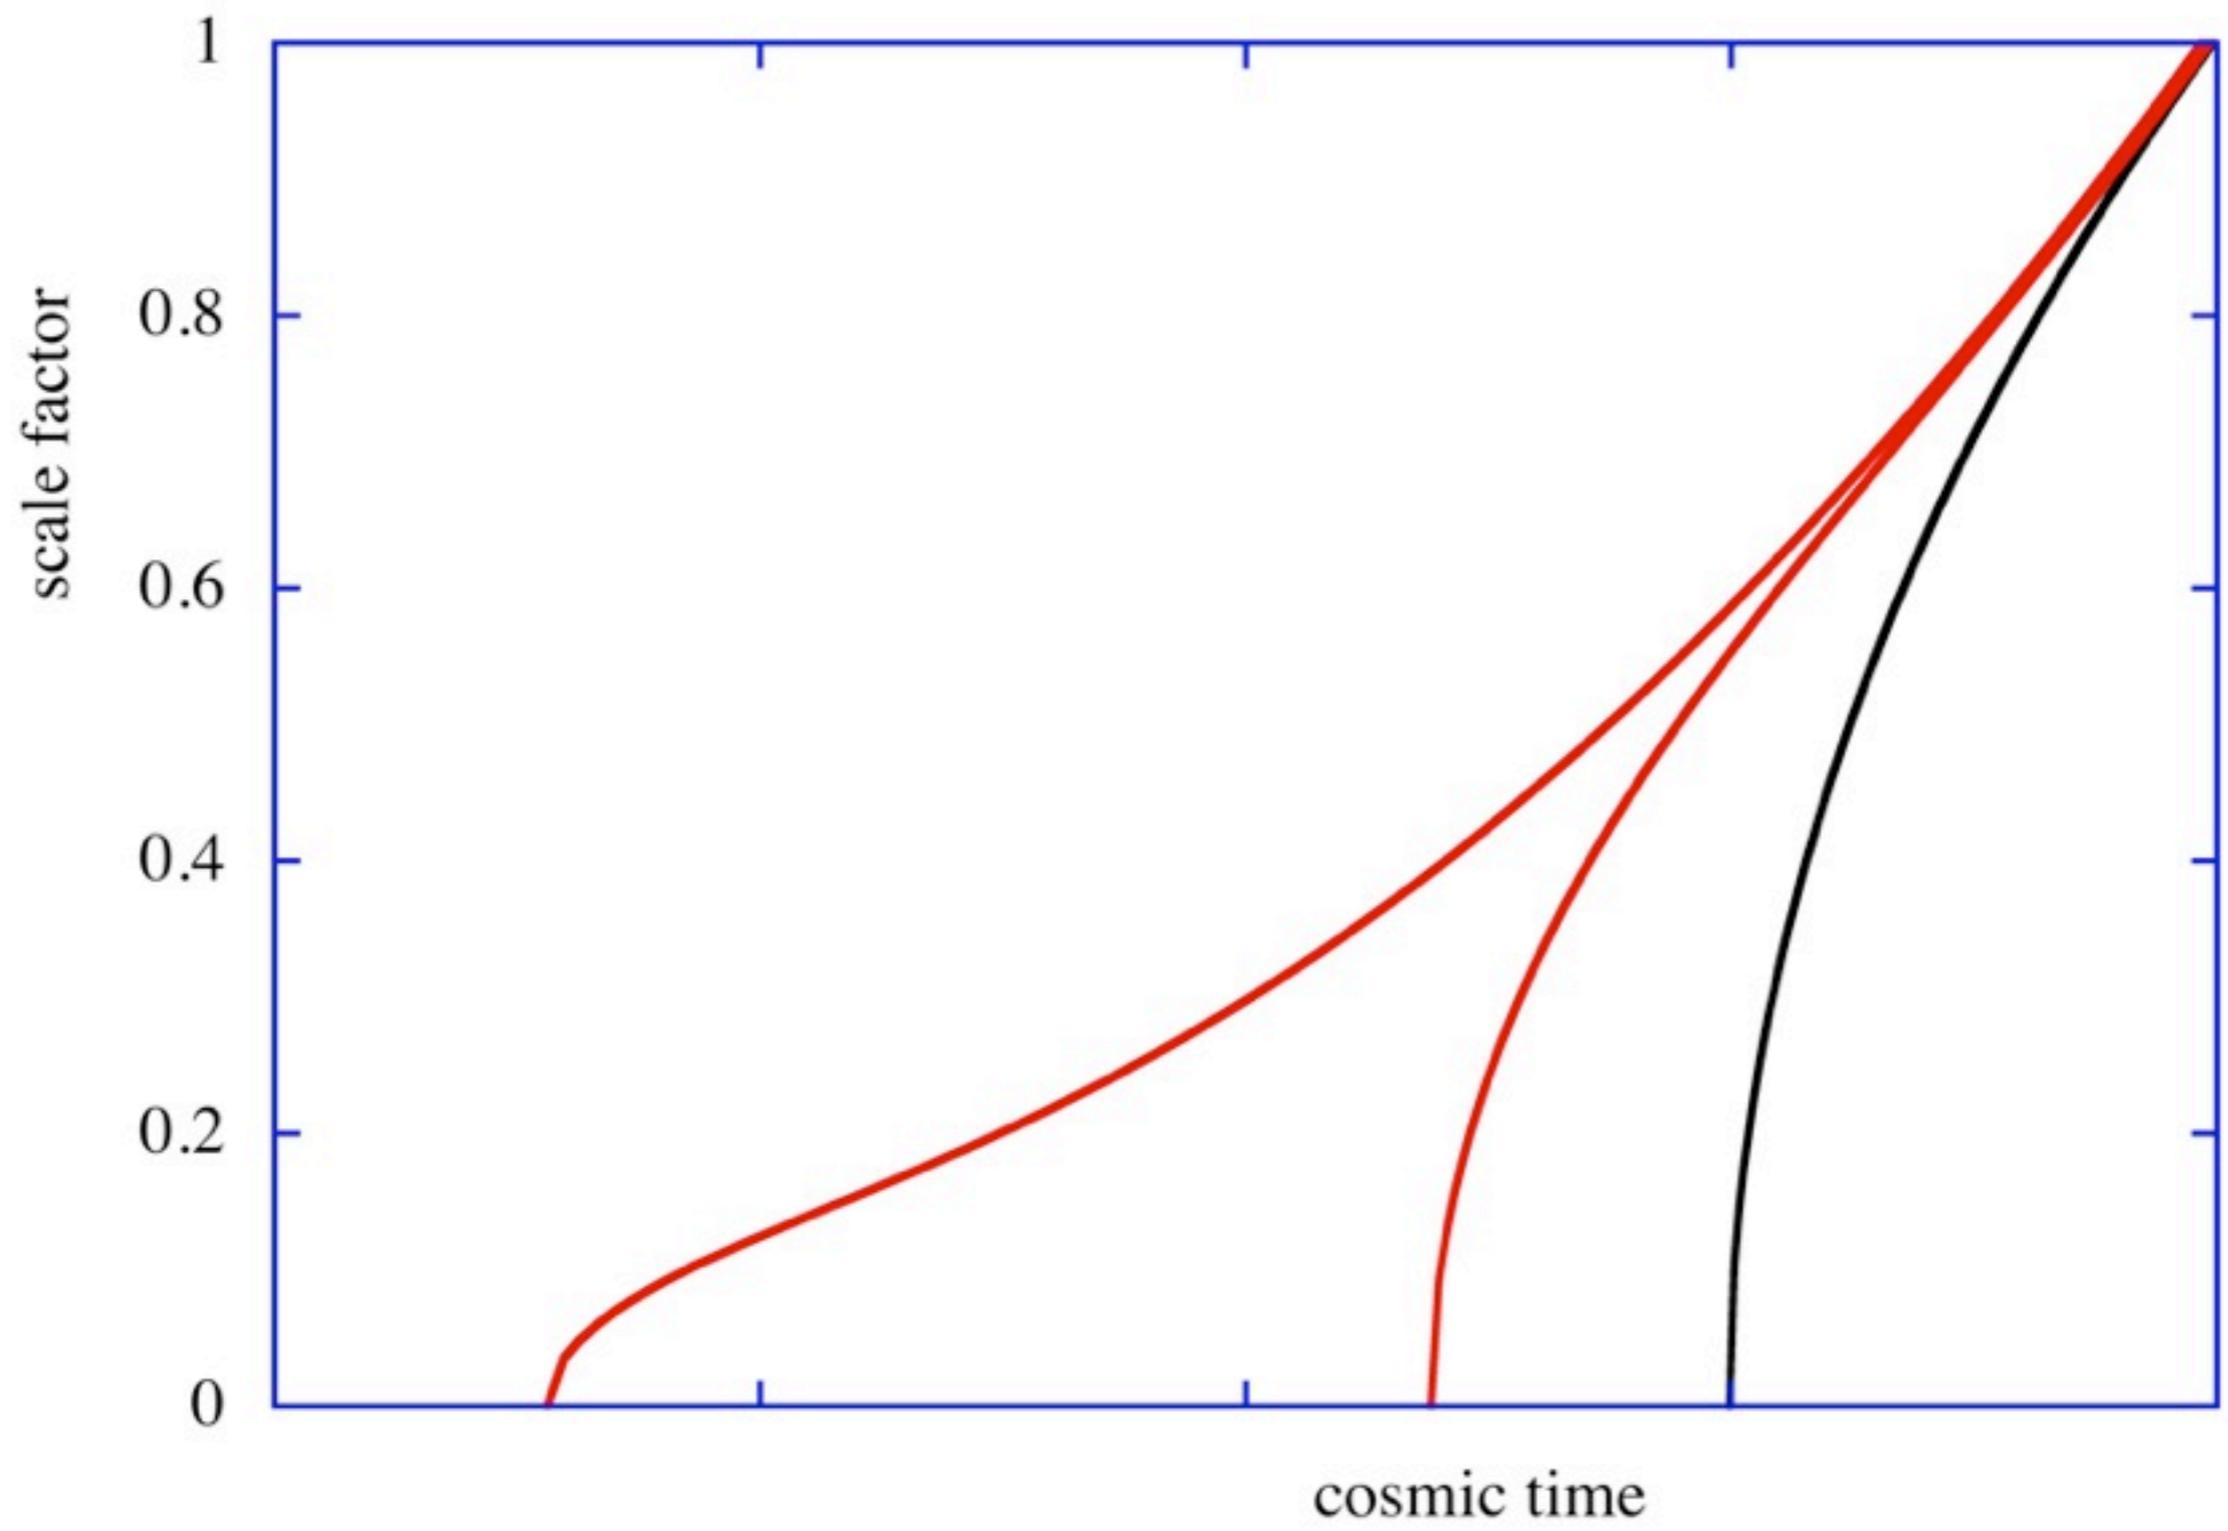

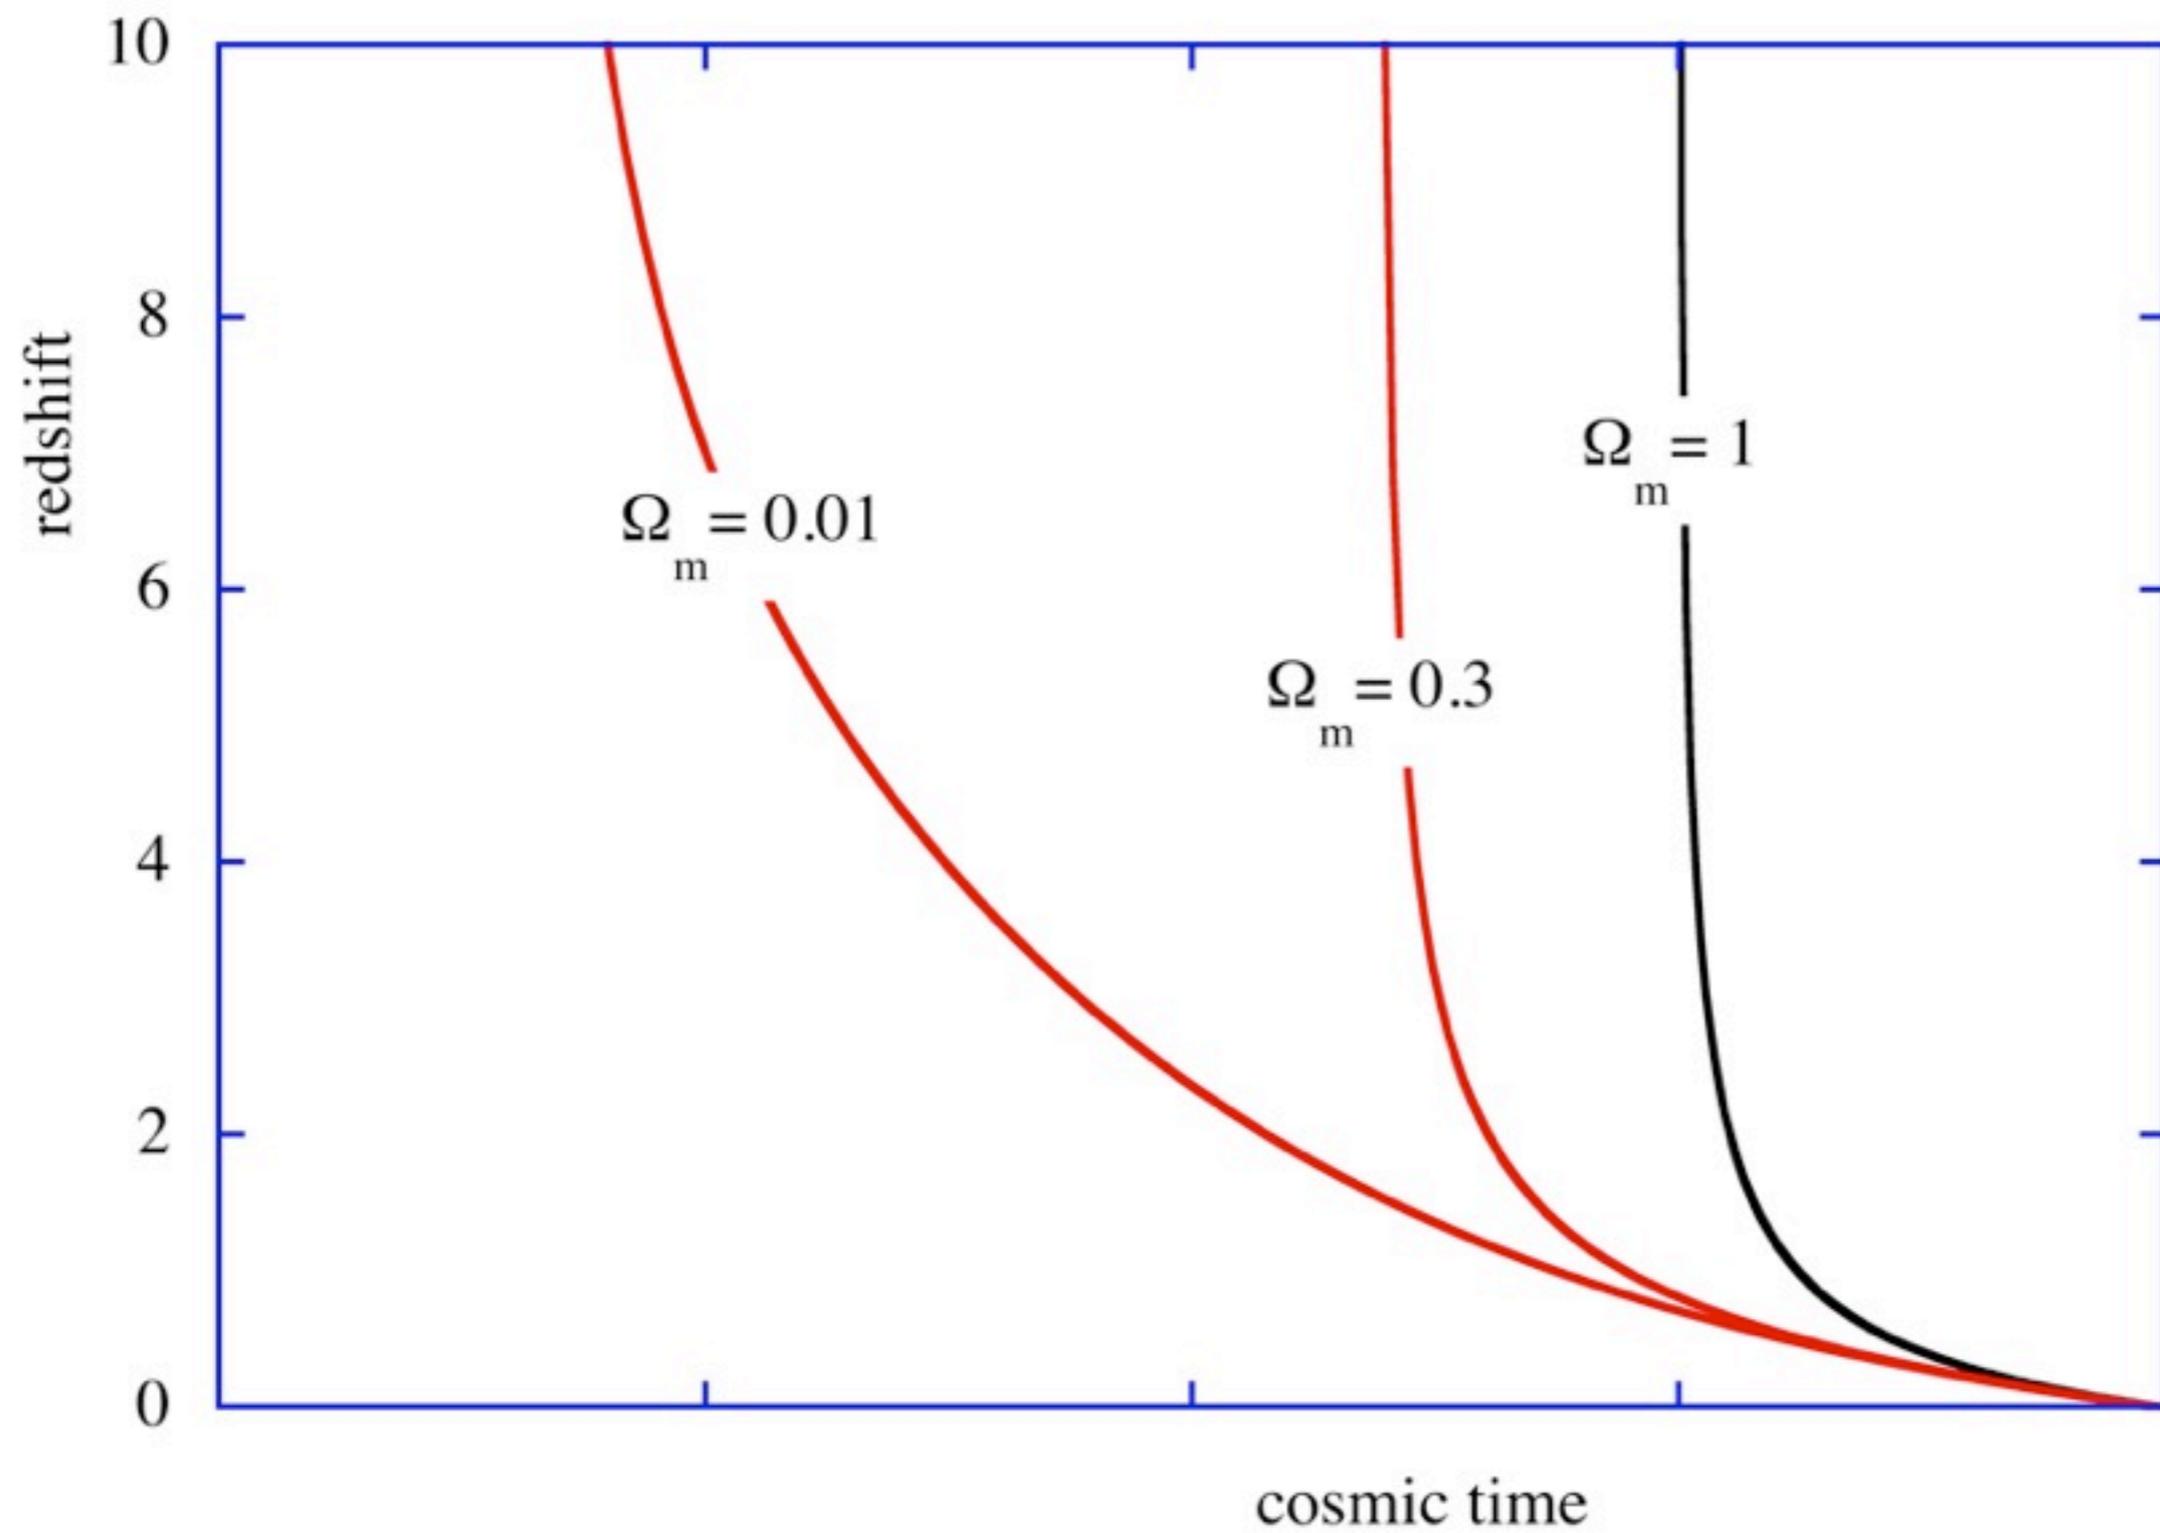

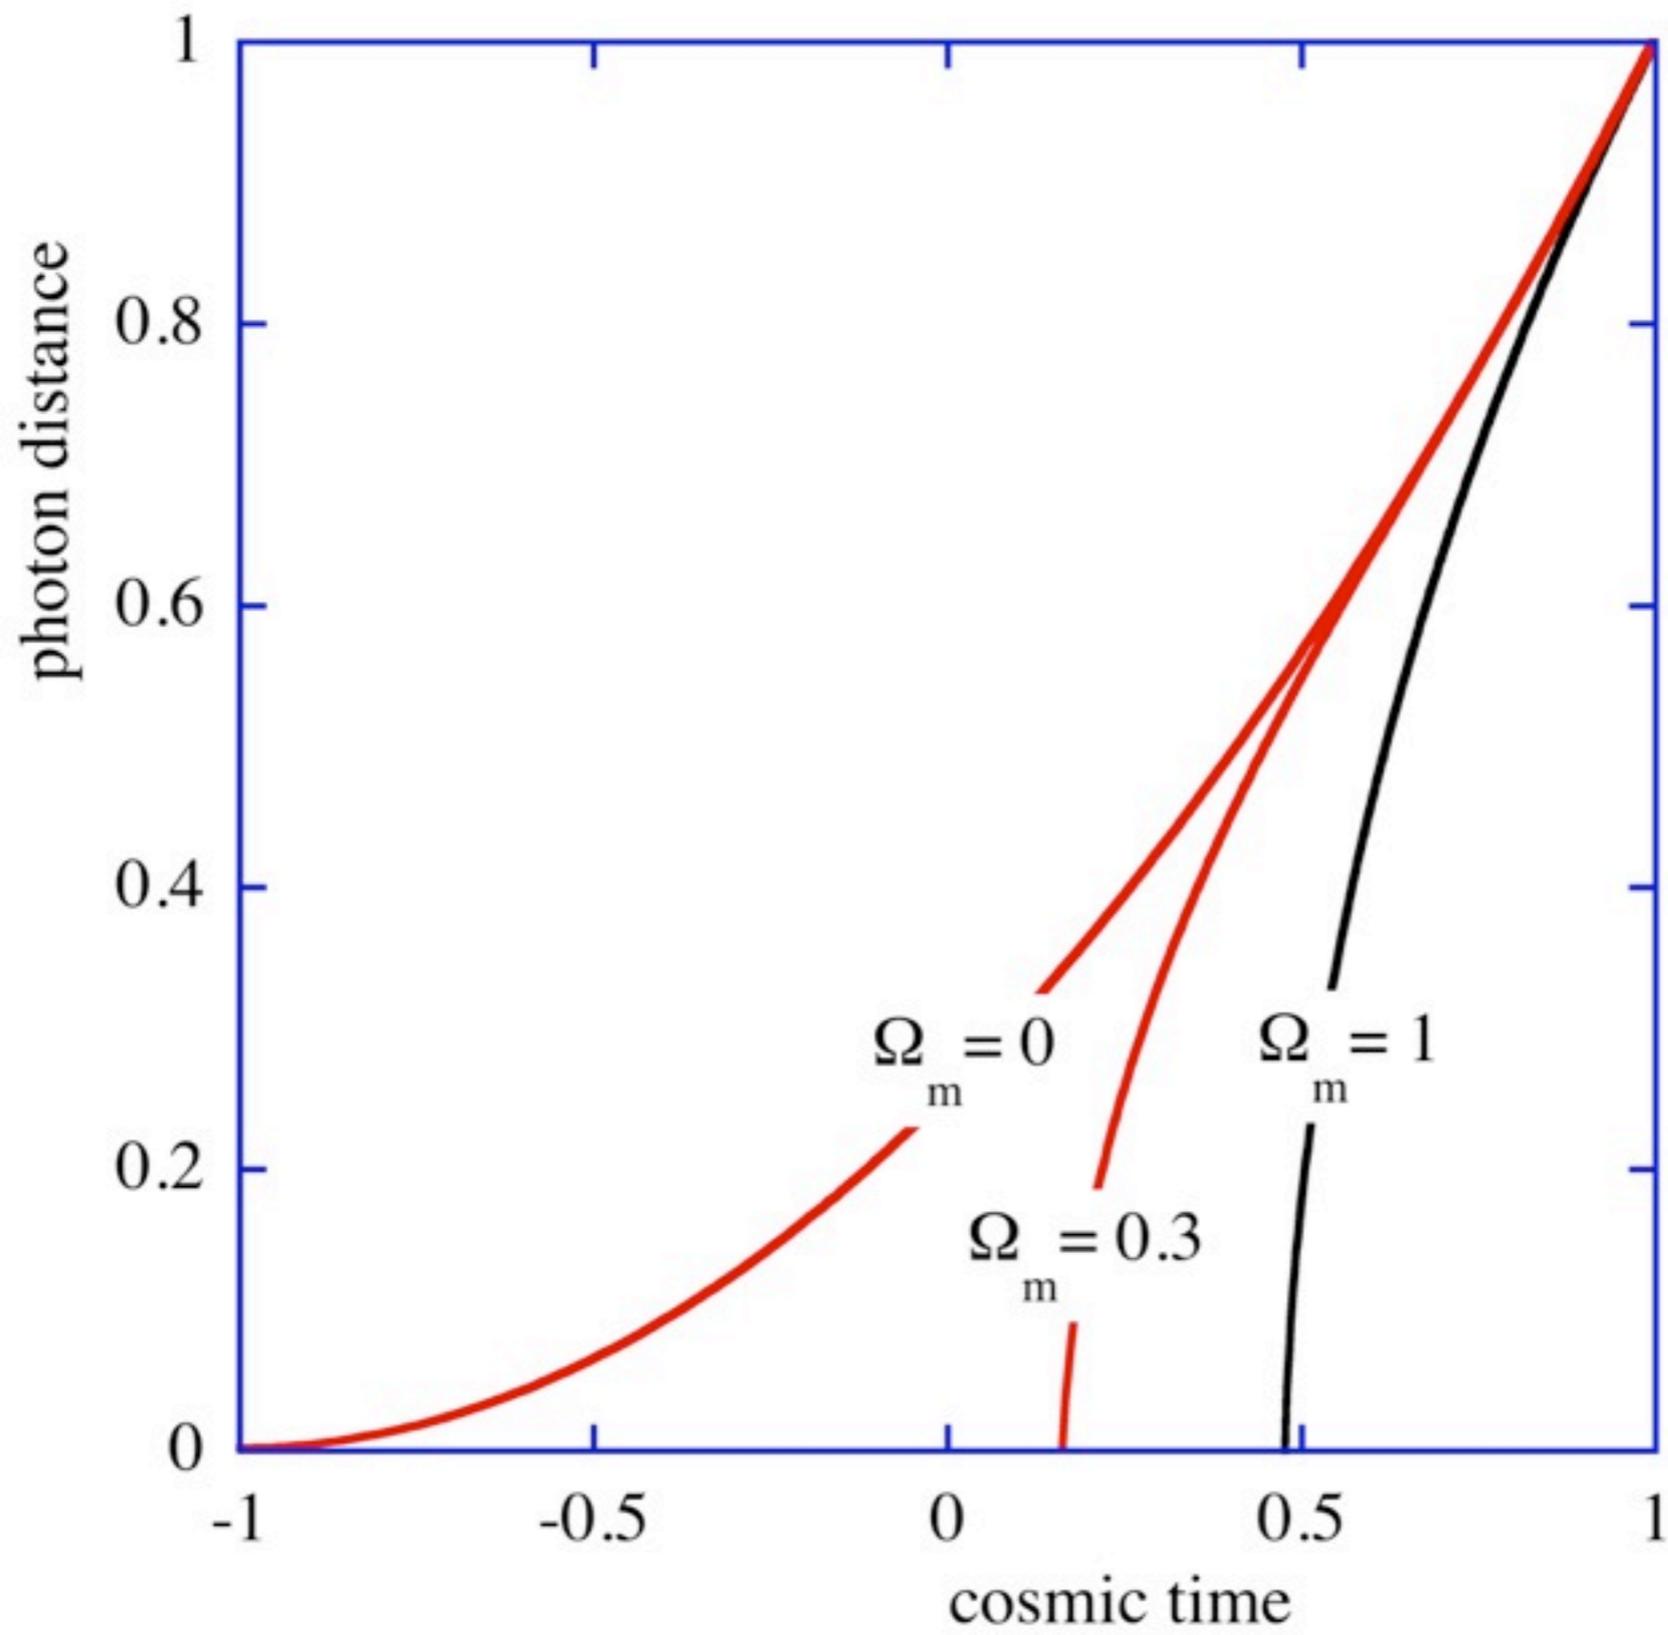

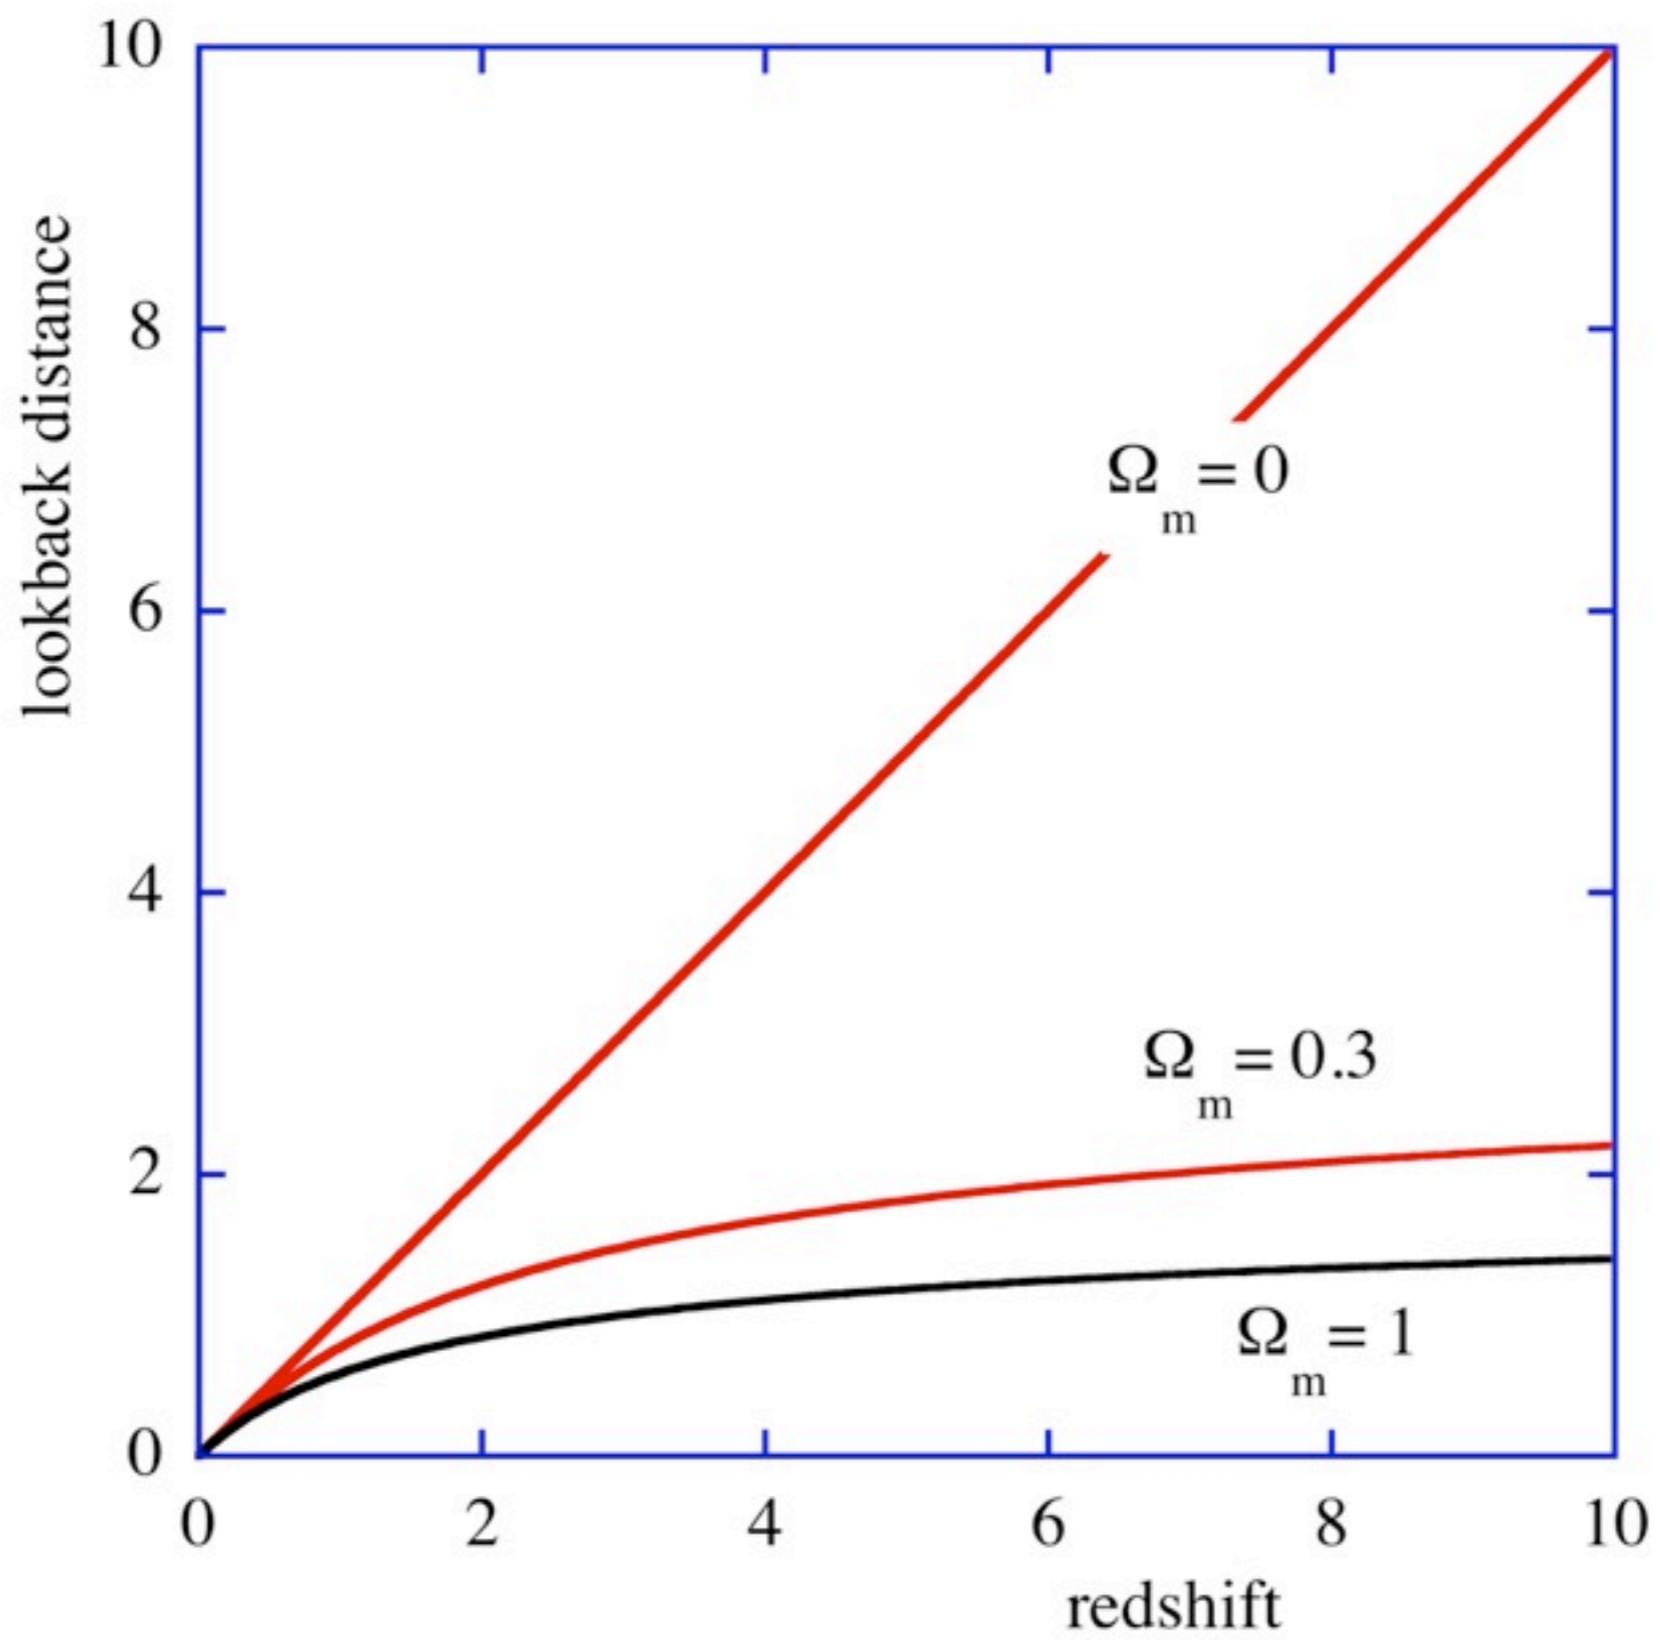

Model Universes

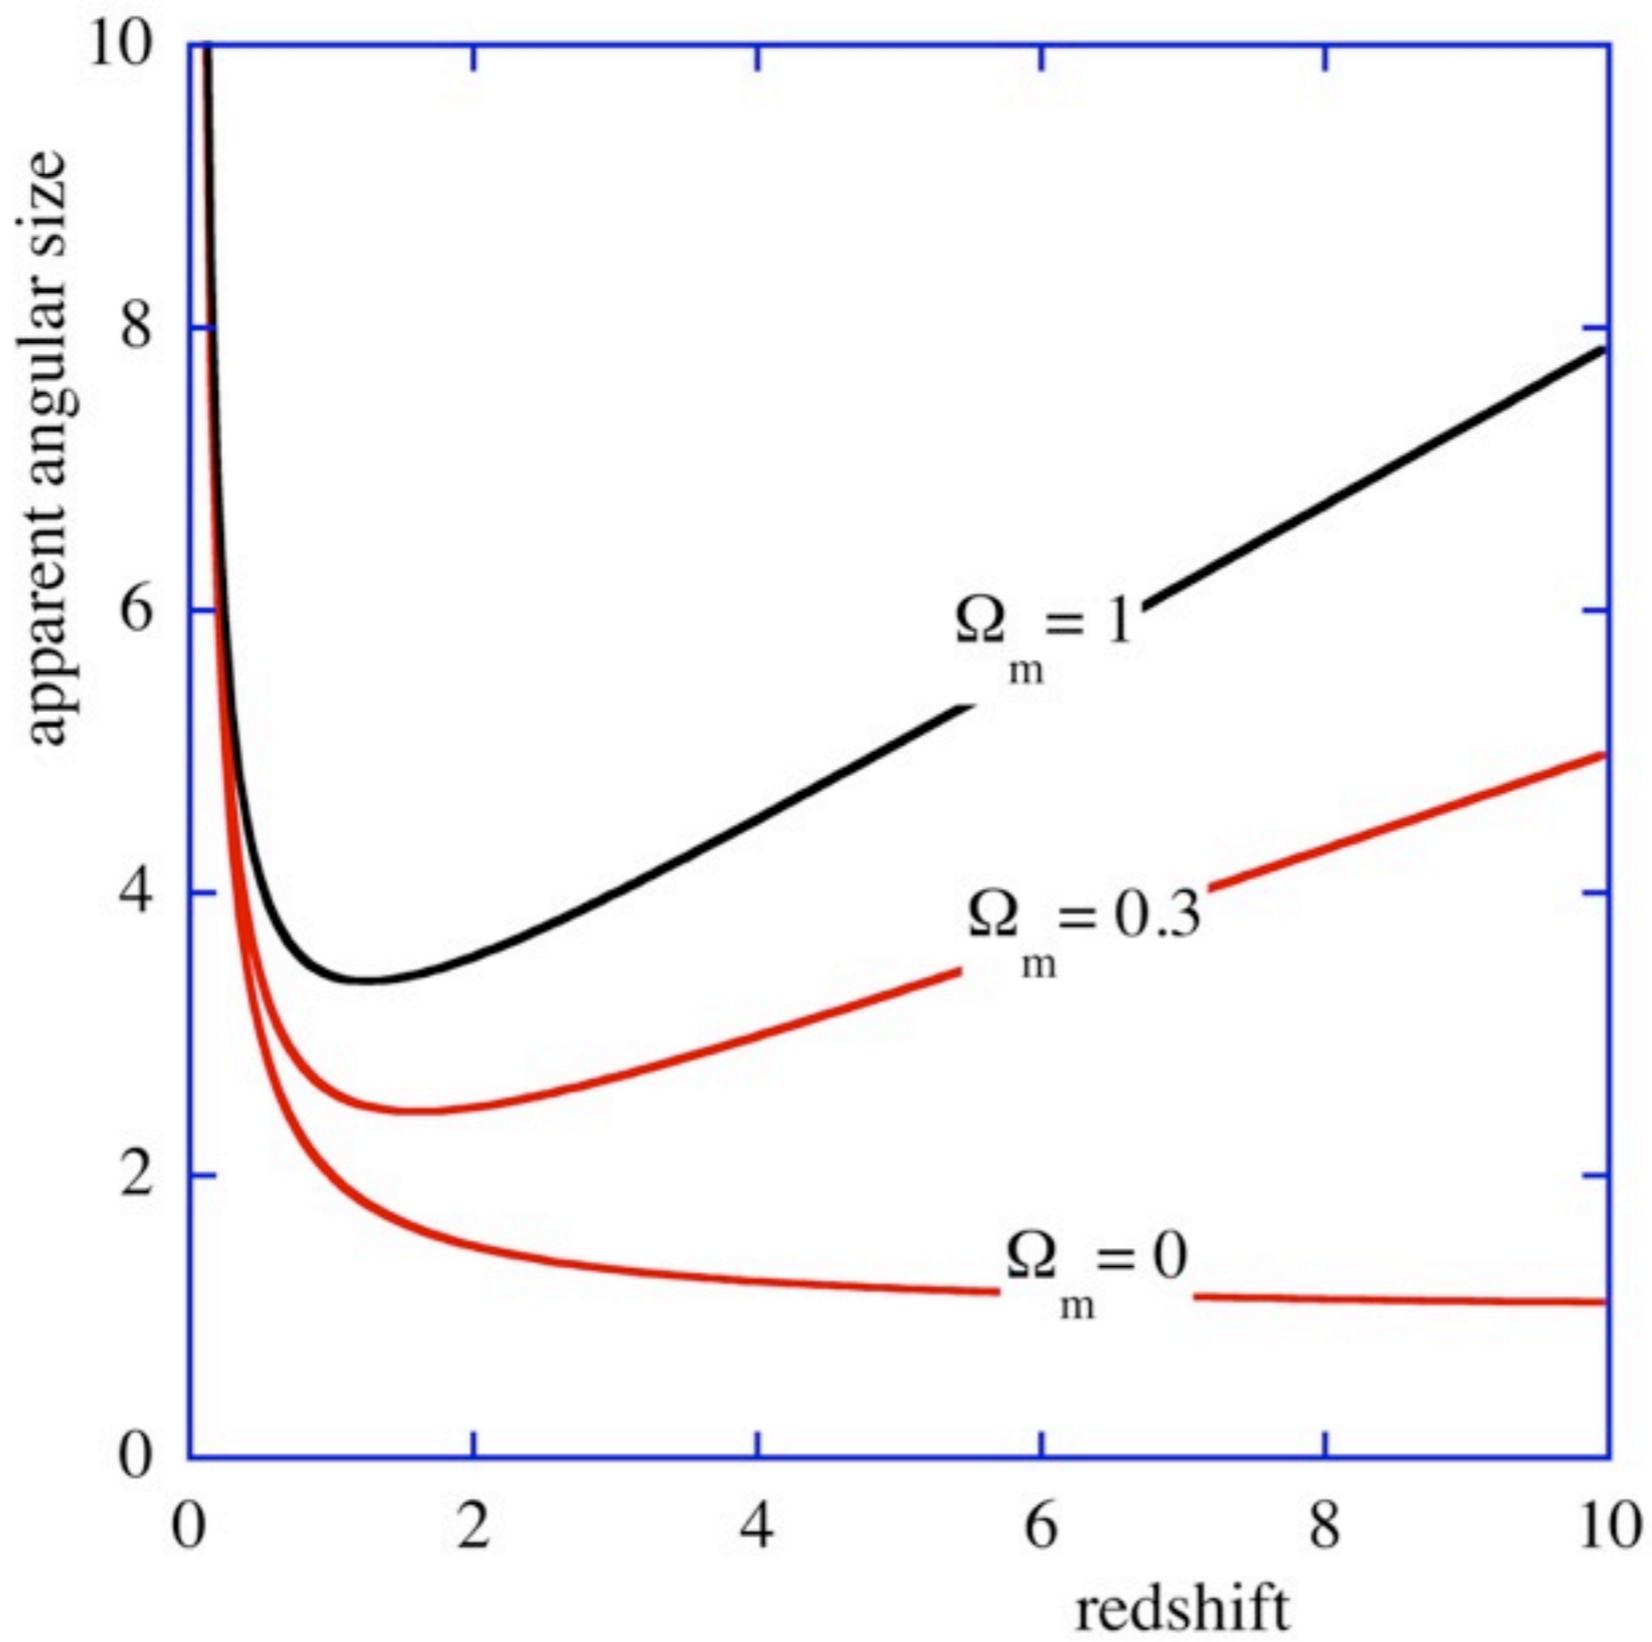

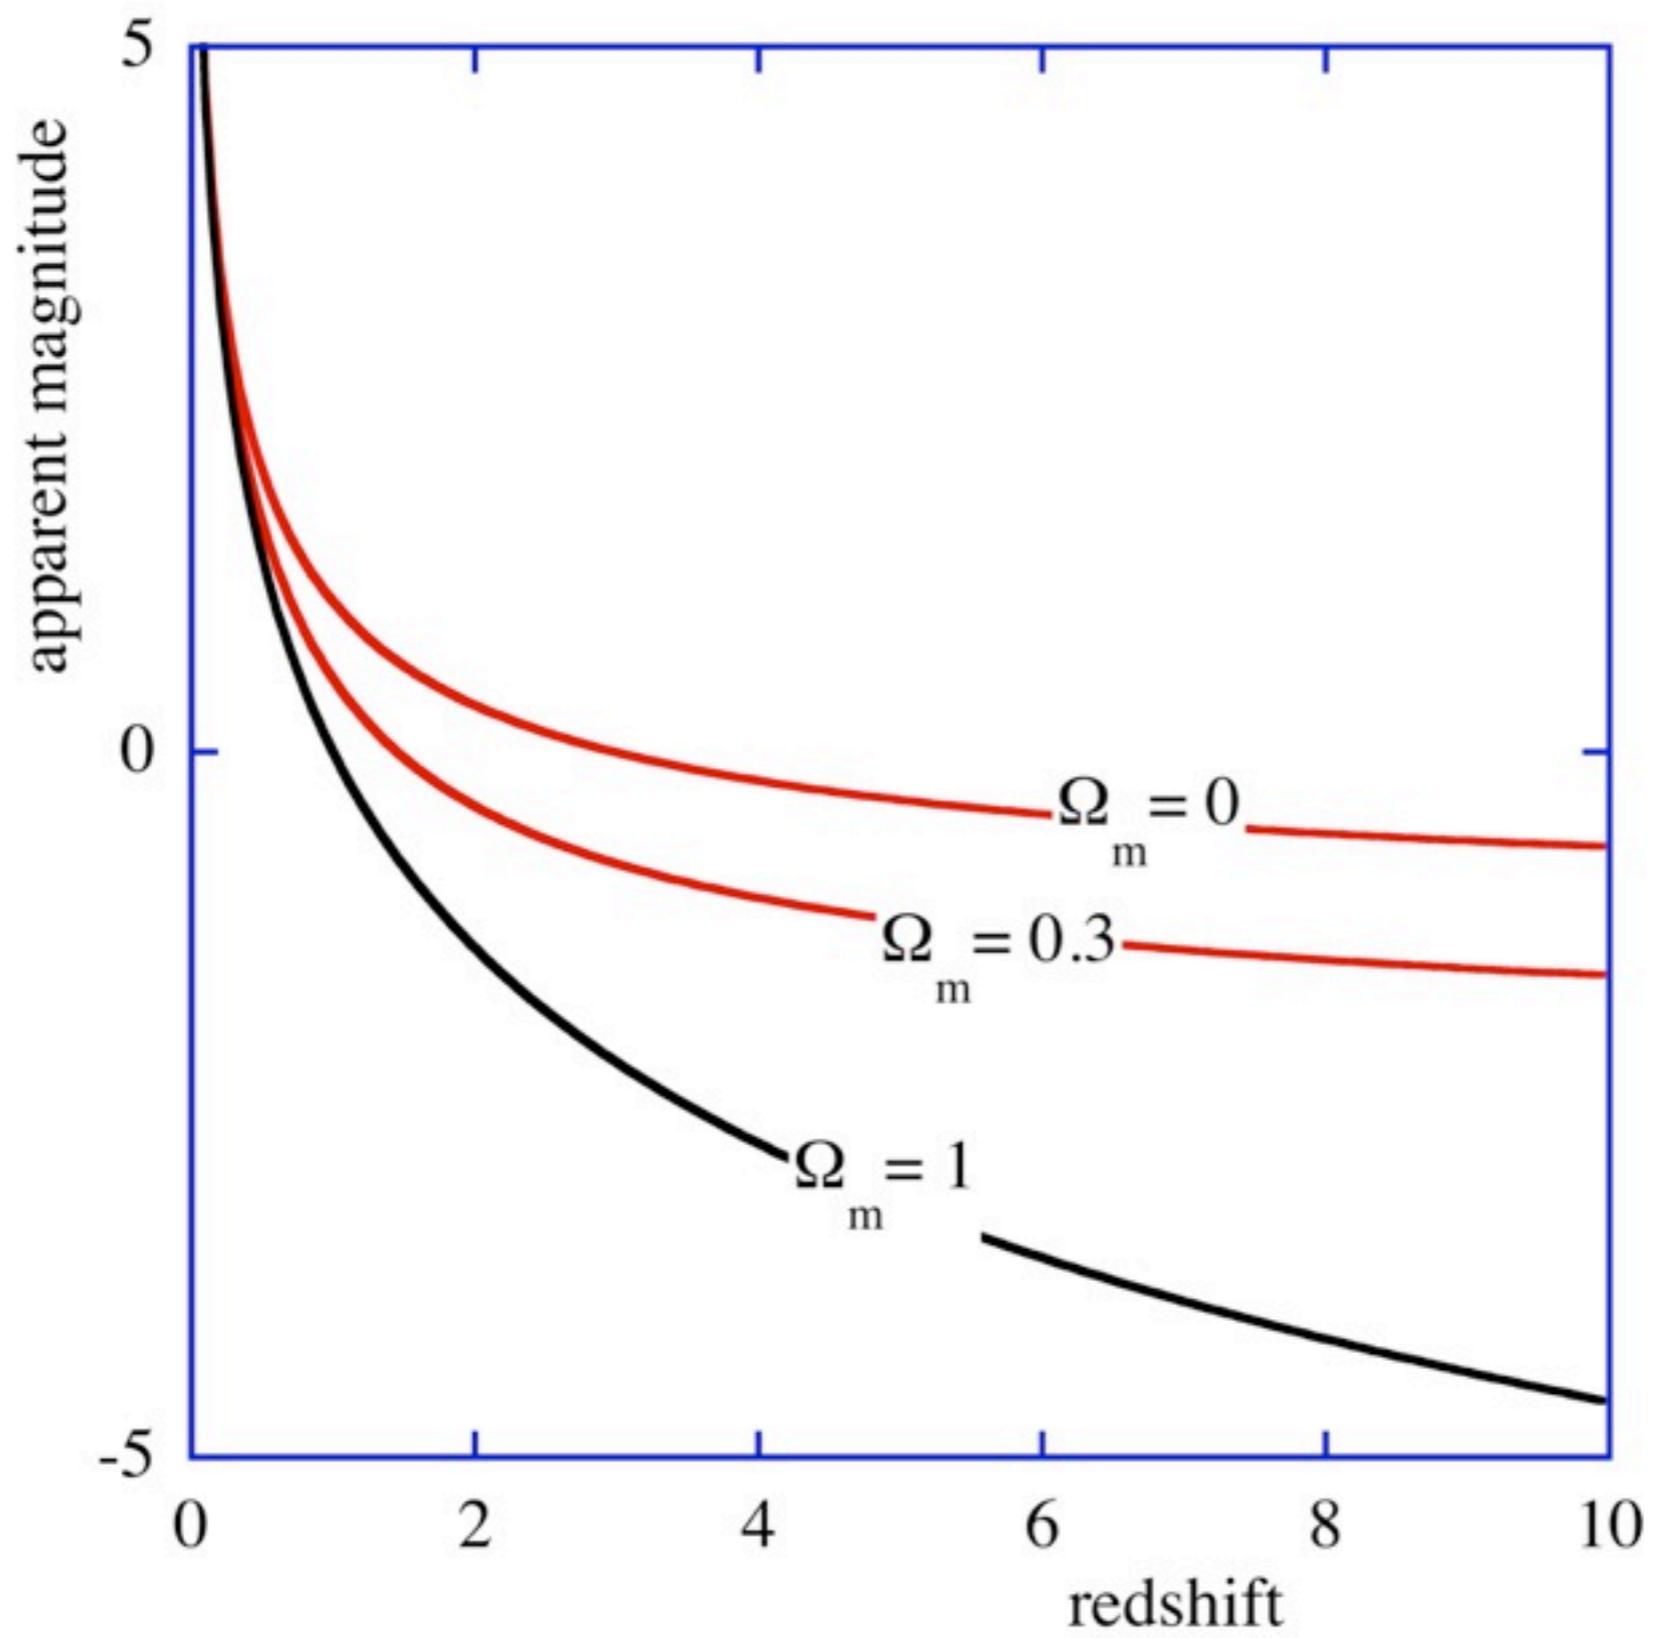

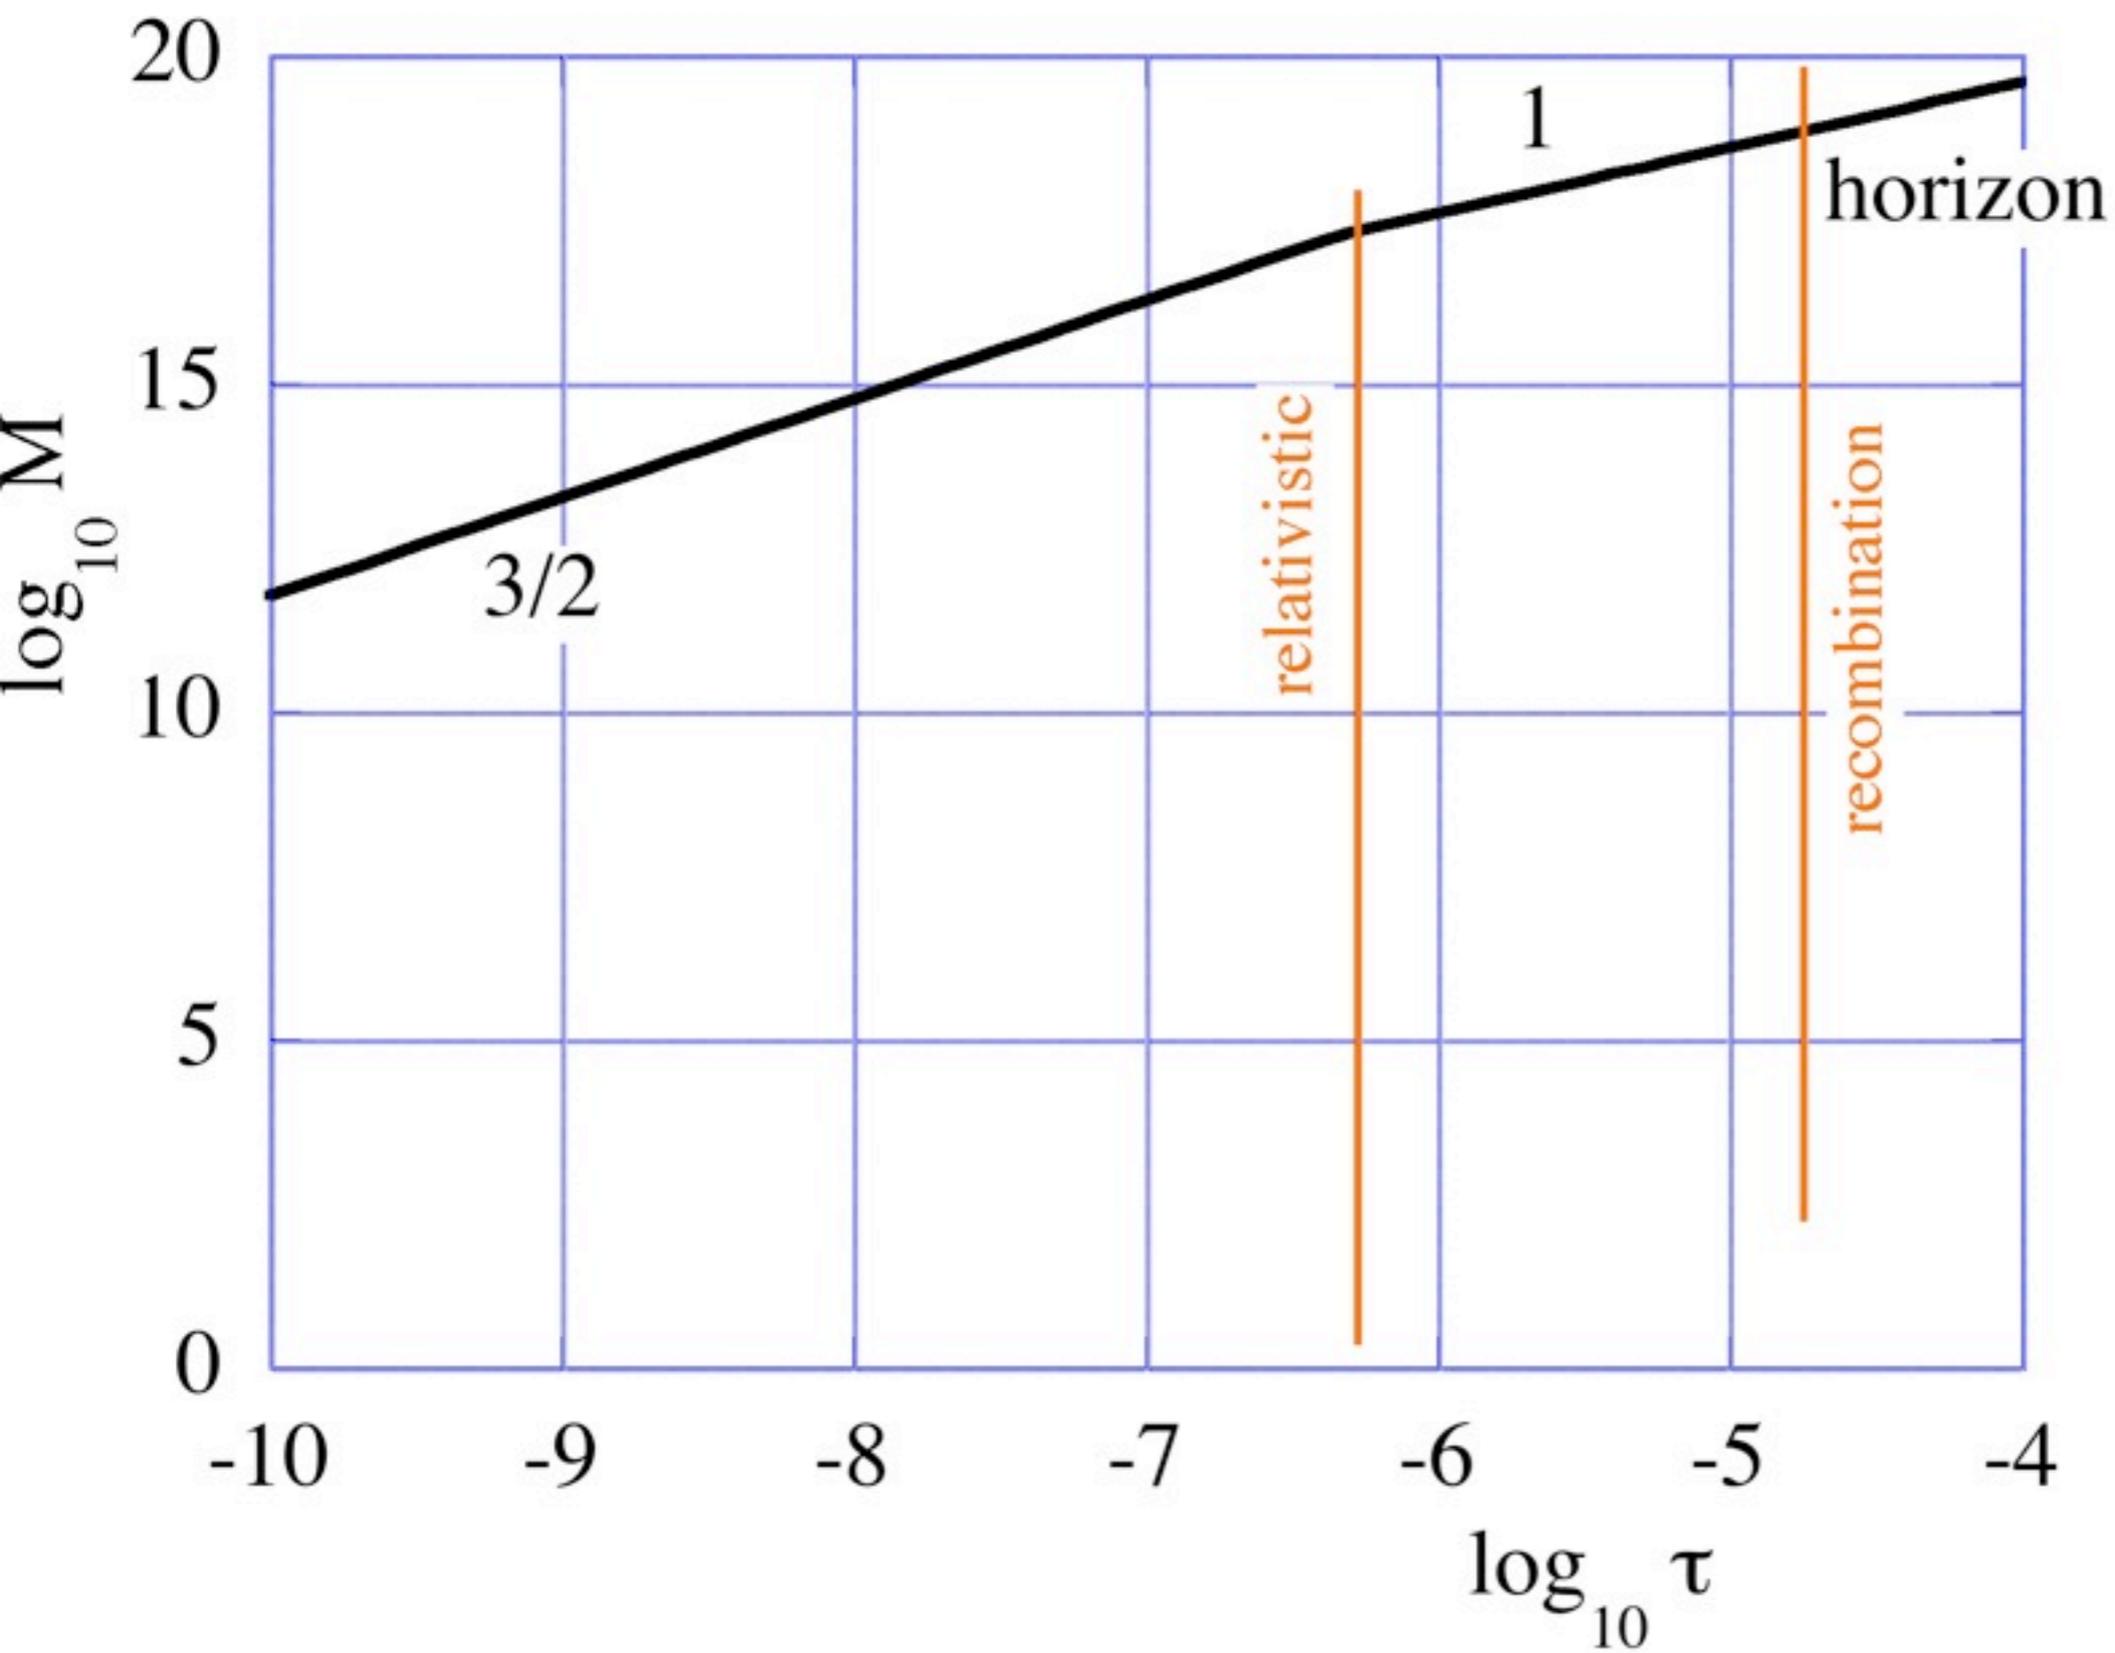

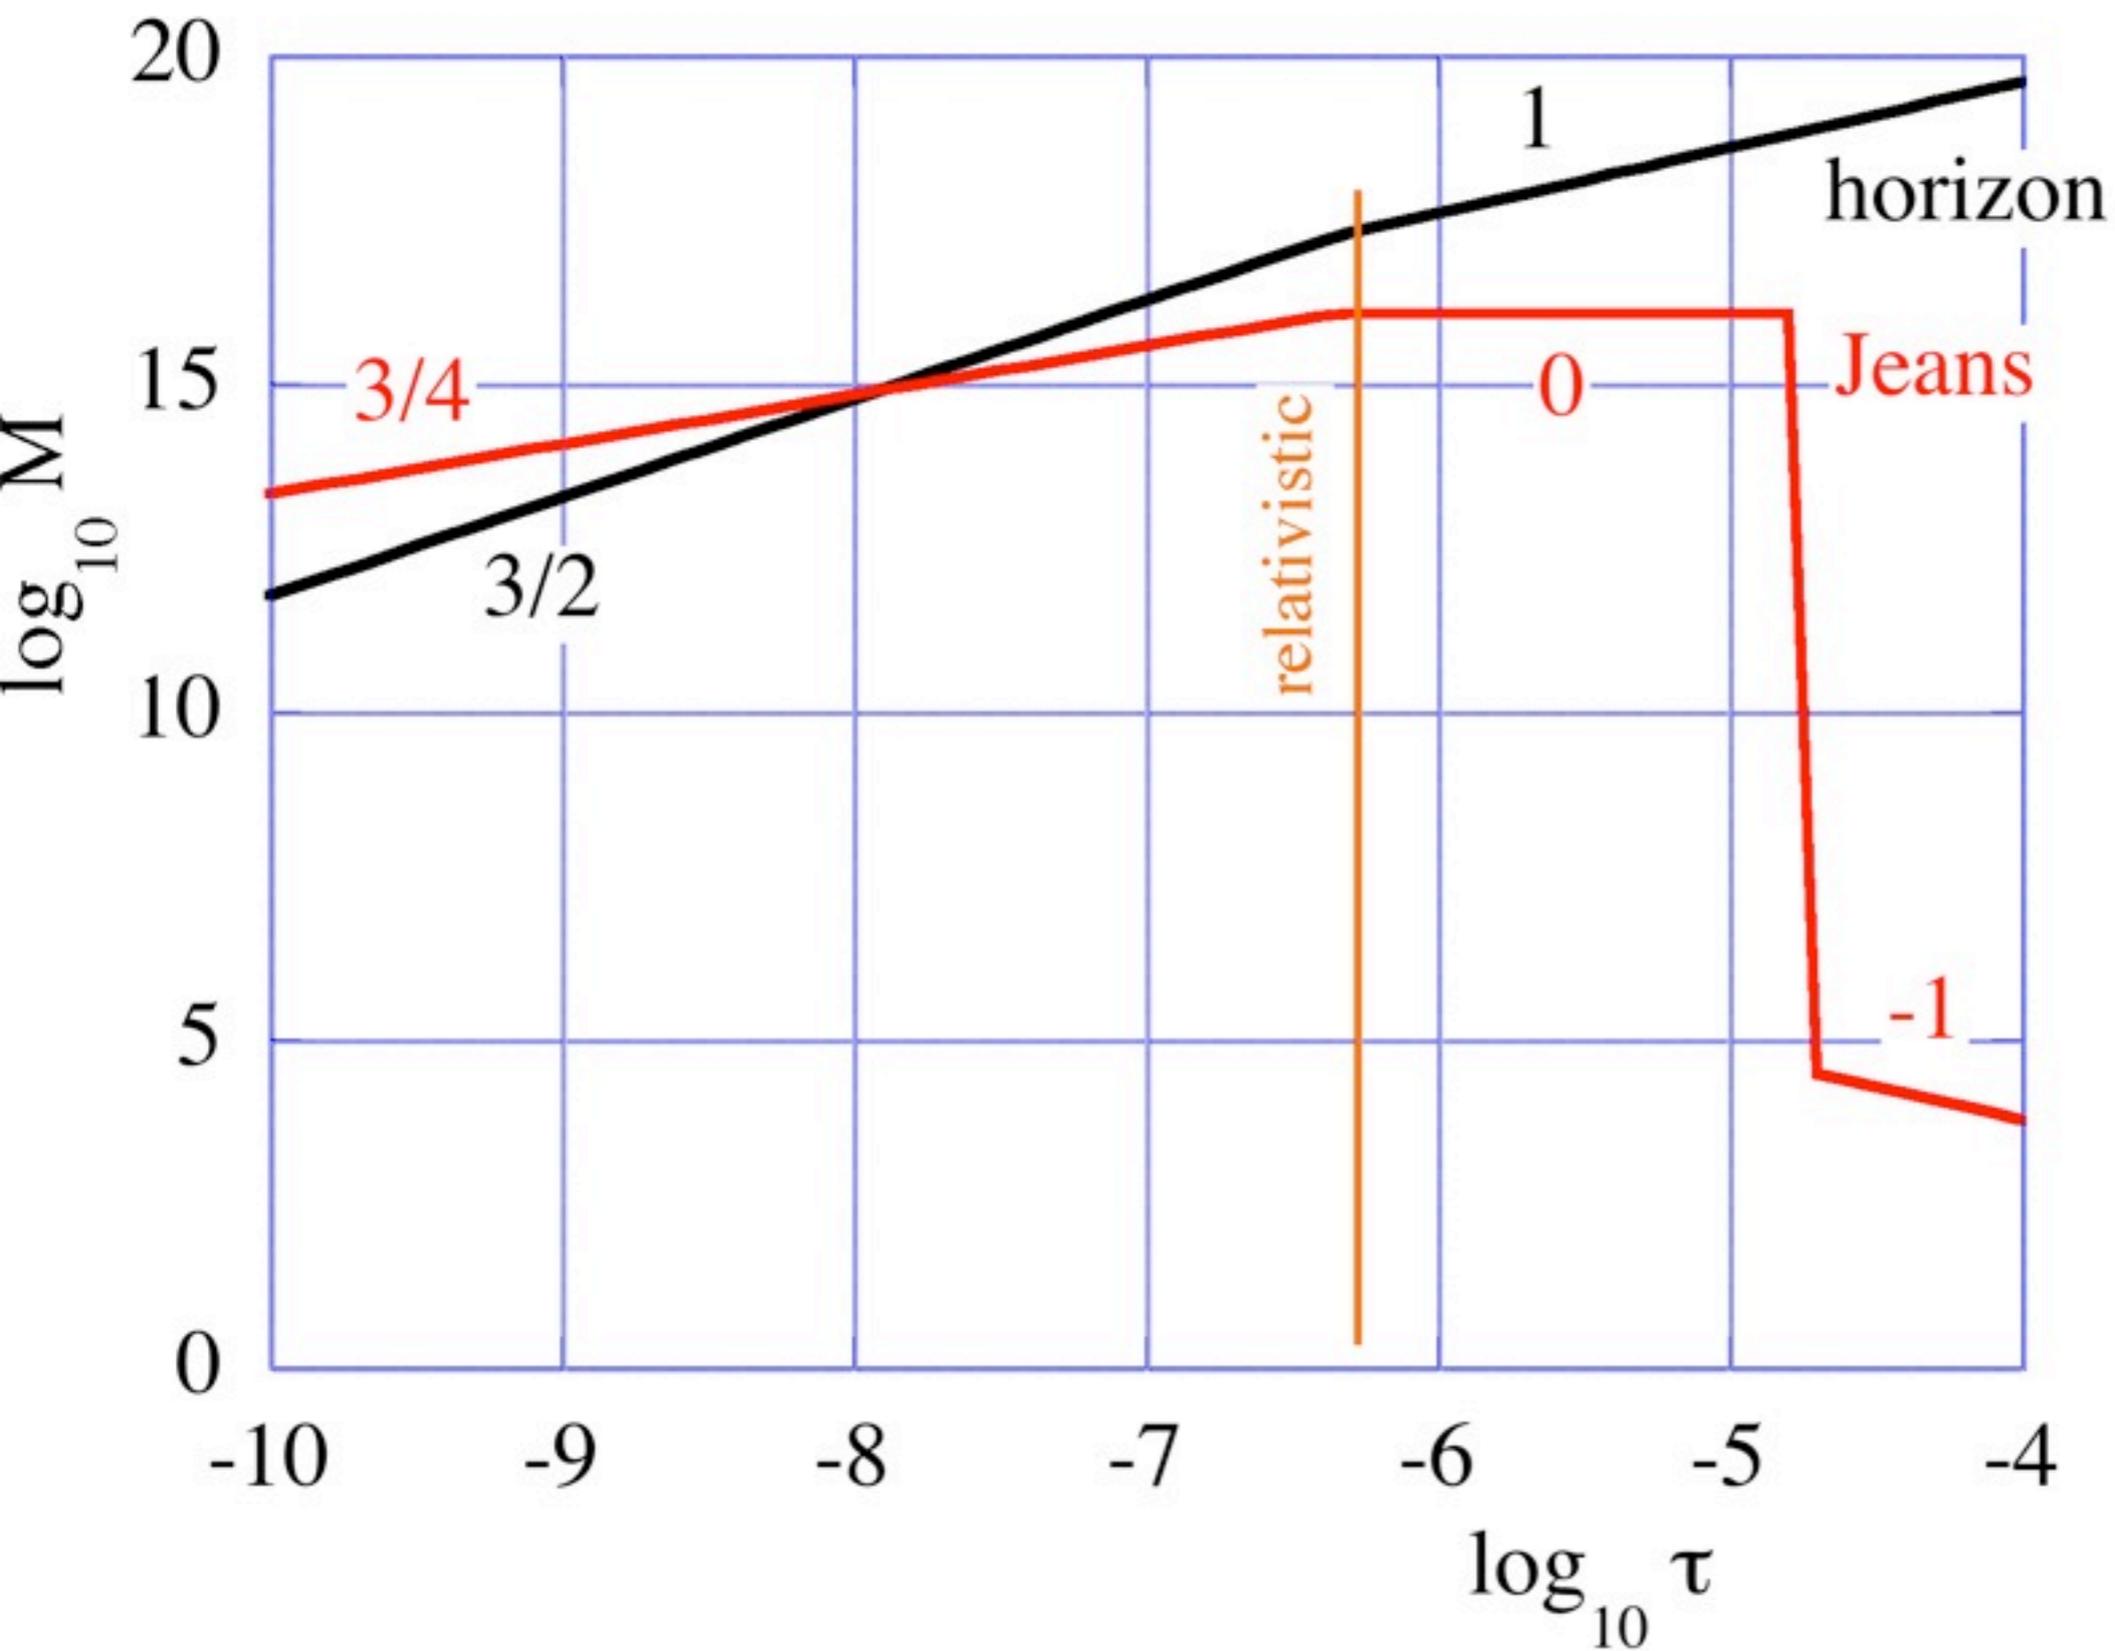

Characteristic Scales

- A specific model universe
- Predicts scales of mass, temperature, time, etc. etc.
- Is used for quantitative analysis of global observables...
- ...and local deviations thereof
