Schema eind presentaties: 25.06.2018 / de Sitter zaal

09.45	**Coffee, tea and cookies served**
10.00-10.20	**David de Lange, Alex van Vorstenbosch** **Determining spectroscopic red shifts of galaxies using machine learning methods**
10.20-10.40	**Christian Groeneveld** **Crowded fields with Micado+ vAPP**
10.40-11.00	**Rico Landman** **Non-linear wavefront reconstruction for pupil-plane wavefront sensors**
11.15-11.35	**Matthijs Mars** **Finding exoplanets in (vAPP) coronographic data**
11.35-11.55	**Joost 't Hart** **Measuring polarization aberrations in the laboratory**
11.55-12.15	**Thijs Stockmans** **Spectrally resolved speckle nulling with the SCAR coronograph**
12.15-13.30	**BREAK**
13.30-13.50	**Govert Verberg** **Photometric redshifts for faint galaxies**
13.50-14.10	**Danker Roozemond** **The contribution of AGNs in SMGs**
14.10-14.30	**Mathijs van Bree** **Analysing convolved images of proto planetary disks**
14.45-15.05	**Adjan Sturm** **Resolved spectroscopy of planet forming disks with Sphere/IFS**
15.05-15.25	**Orlin Koop** **Determining the maximal distance for which gravitational waves can be observed for binary white dwarf systems**
15.25-15.45	**Pieter Speelman, Okke van der Haak** **Stellar disk reconstruction using spectro-polametry**
16.00-16.20	**David van Dop, Tjerk Venema** **On the detection of molecular outflows from galaxies using OH+**
