MIDI

- Mid-infrared interferometer for the VLTI
- Combines light from 2 telescopes
- Wavelength N-band and Q-band
- Imaging or spectroscopy
- Dispersion low and medium

Design criterion

- Monolithic manufacture
- Homogeneity
- Isostatic mounting
- Uniformity
- Accessibility

Problems

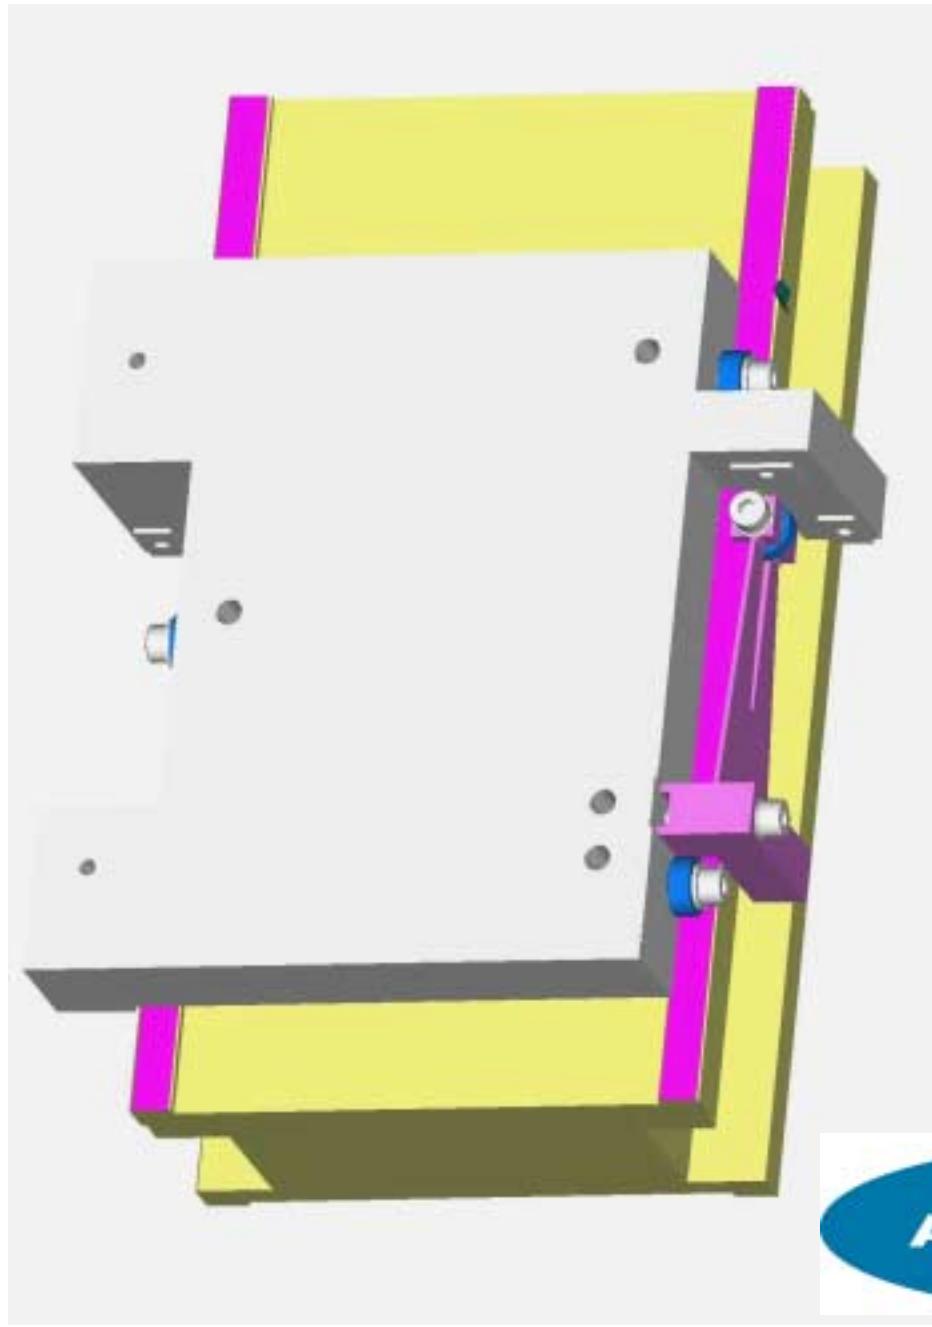

- Very cold temperatures
 - electronics
 - materials
- High vacuum
 - out gassing
 - air pockets

MIDI slider

- External motors
- cryogenic bearings
- V-groove positioning
 - allows external motor without need for high accuracy feedthrough

List of Filters

- N-band
- NeII
- NeII_ref2
- SiC
- PAH1+ArIII_ref1
- ArIII+PAH1_ref2
- PAH2
- SIV

List of Spatial Filters

- Open
- Full field
- 0.4mm pinhole
- 170, 110, 71 micron triple pinholes
- 200, 100, 50 slits
